1 General

1.1 Overview

This document is the non-proprietary FIPS 140-3 Security Policy for version 1.10.0-9a1db72d64086a2f of the Libgcrypt cryptography module for AlmaLinux 9. It contains the security rules under which the module must operate and describes how this module meets the requirements as specified in FIPS PUB 140-3 (Federal Information Processing Standards Publication 140-3) for an overall Security Level 1 module.

1.2 Security Levels

1.3 Additional Information

This Security Policy describes the features and design of the module named Libgcrypt cryptography module for AlmaLinux 9 using the terminology contained in the FIPS 140-3 specification. The FIPS 140-3 Security Requirements for Cryptographic Module specifies the security requirements that will be satisfied by a cryptographic module utilized within a security system protecting sensitive but unclassified information. The NIST/CCCS Cryptographic Module Validation Program (CMVP) validates cryptographic module to FIPS 140-3. Validated products are accepted by the Federal agencies of both the USA and Canada for the protection of sensitive or designated information.

This Non-Proprietary Security Policy may be reproduced and distributed, but only whole and intact and including this notice. Other documentation is proprietary to their authors.

In preparing the Security Policy document, the laboratory formatted the vendor-supplied documentation for consolidation without altering the technical statements therein contained. The further refining of the Security Policy document was conducted iteratively throughout the conformance testing, wherein the Security Policy was submitted to the vendor, who would then edit, modify, and add technical contents. The vendor would also

supply additional documentation, which the laboratory formatted into the existing Security Policy, and resubmitted to the vendor for their final editing.

2 Cryptographic Module Specification

2.1 Description

Purpose and Use:

The Libgcrypt cryptography module for AlmaLinux 9 (hereafter referred to as "the module") is a software library implementing general purpose cryptographic algorithms. The module provides cryptographic services to applications running in the user space of the underlying operating system through an application program interface (API).

Module Type: Software

Module Embodiment: MultiChipStand

Cryptographic Boundary:

The module consists of the shared library file (i.e. libgcrypt.so.20.4.0) which constitutes the cryptographic boundary. The block diagram in Figure 1 shows the cryptographic boundary of the module, its interfaces with the operational environment and the flow of information between the module and operator.

Tested Operational Environment's Physical Perimeter (TOEPP):

The TOEPP is the general-purpose computer on which the module is installed.

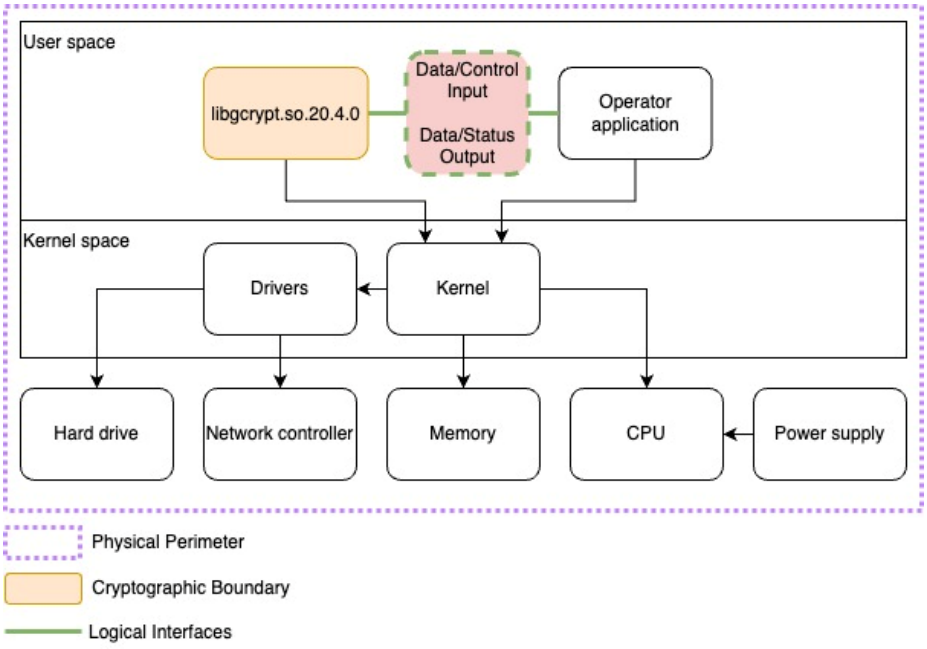

Figure 1: Block Diagram

2.2 Tested and Vendor Affirmed Module Version and Identification

Tested Module Identification – Software, Firmware, Hybrid (Executable Code Sets):

Package or File Name	Software/ Firmware Version	Features	Integrity Test
/usr/lib64/libgcrypt.so.20.4.0	1.10.0-9a1db72d64086a2f	N/A	HMAC-SHA-256

Table 2: Tested Module Identification – Software, Firmware, Hybrid (Executable Code Sets)

Tested Operational Environments - Software, Firmware, Hybrid:

Operating System	Hardware Platform	Processors	PAA/PAI	Hypervisor or Host OS	Version(s)
Almalinux 9.2	Amazon Web Services (AWS) m5.metal	Intel Xeon Platinum 8259CL	Yes	N/A	1.10.0-9a1db72d64086a2f
Almalinux 9.2	Amazon Web Services (AWS) m5.metal	Intel Xeon Platinum 8259CL	No	N/A	1.10.0-9a1db72d64086a2f

Table 3: Tested Operational Environments - Software, Firmware, Hybrid

2.3 Excluded Components

The module does not claim any excluded components.

2.4 Modes of Operation

Modes List and Description:

Mode Name	Description	Type	Status Indicator
Approved Mode	Automatically entered whenever an approved service is requested.	Approved	The approved mode indicator maps to the approved service indicator which is GPG_ERR_NO_ERROR, which corresponds to return code 0
Non-approved Mode	Automatically entered whenever a non-approved service is requested.	Non-Approved	The Non-Approved mode indicator maps to the non-approved service indicator which is non-zero return code

Table 4: Modes List and Description

Mode Change Instructions and Status:

When the module starts up successfully, after passing all the pre-operational self-test and the cryptographic algorithms self-tests (CASTs), the module is operating in the approved mode of operation by default and can only be transitioned into the non-approved mode by calling one of the non-approved services listed in the Non-Approved Services table. The module will transition back to approved mode when approved service is called. Section 4 provides details on the service indicator implemented by the module. The service indicator identifies when an approved service is called.

Degraded Mode Description:

The module does not implement a degraded mode of operation.

2.5 Algorithms

Approved Algorithms:

Algorithm	CAVP Cert	Properties	Reference

Table 5: Approved Algorithms

The above table lists all approved cryptographic algorithms of the module, including specific key lengths employed for approved services, and implemented modes or methods of operation of the algorithms.

Vendor-Affirmed Algorithms:

Name	Properties	Implementation	Reference
Cryptographic Key Generation (CKG)	Key type:Asymmetric	N/A	SP 800-133r2, section 4, example 1

Table 6: Vendor-Affirmed Algorithms

Non-Approved, Allowed Algorithms:

N/A for this module.

The module does not implement non-approved algorithms that are allowed in the approved mode of operation.

Non-Approved, Allowed Algorithms with No Security Claimed:

N/A for this module.

The module does not implement non-approved algorithms that are allowed in the approved mode of operation with no security claimed.

Non-Approved, Not Allowed Algorithms:

Name	Use and Function
MD5	Message Digest
ECDH	Shared Secret Computation
AES-GCM, AES-GCM-SIV, AES-OCB, AES-EAX	Symmetric encryption; Symmetric decryption
RSA	Signature generation/verification primitives; Encryption/decryption primitives
RSA using public key flags not listed in section 4.6	Key generation; Signature generation/verification
ECDSA	Signature generation/verification primitives
ECDSA using public key flags not listed in section 4.6	Key generation; Signature generation/verification

Table 7: Non-Approved, Not Allowed Algorithms

The table above lists all non-approved cryptographic algorithms of the module employed by the non-approved services.

2.6 Security Function Implementations

Name	Type	Description	Properties	Algorithms
Symmetric encryption and decryption	BC-UnAuth	Encryption, decryption using AES	Keys:128, 192, 256 bits with 128-256 of key strength	AES-ECB: (A5138, A5139, A5141, A5142) AES-CBC: (A5138, A5139, A5141, A5142) AES-CFB8: (A5138, A5139, A5141, A5142) AES-CFB128: (A5138, A5139, A5141, A5142) AES-OFB: (A5138, A5139, A5141, A5142) AES-CTR: (A5138, A5139, A5141, A5142)
MAC generation and verification	MAC	Message authentication generation using AES CMAC	Keys:128, 192, 256 bits with 128, 192, 256 bits of strength	AES-CMAC: (A5138, A5139, A5141, A5142)

Name	Type	Description	Properties	Algorithms
Authenticated symmetric encryption and decryption with AES CCM	BC-Auth	Encryption, decryption using AES CCM	Keys:128, 192, 256 bits with 128, 192, 256 bits of strength	AES-CCM: (A5138, A5139, A5141, A5142)
Symmetric encryption and decryption with AES XTS (for data storage)	BC-UnAuth	Encryption, decryption using AES XTS (for data storage)	Keys:128, 256 bits with 128, 256 bits of strength	AES-XTS Testing Revision 2.0: (A5138, A5139, A5141, A5142)
Random number generation	DRBG	Random number generation using CTR_DRBG, Hash_DRBG, HMAC_DRBG	CTR_DRBG:AES-128, AES-192, AES-256 with DF, with/without PR Hash_DRBG:SHA-1, SHA-256, SHA-512 with/without PR HMAC_DRBG:SHA-1, SHA-256, SHA-512 with/without PR	Counter DRBG: (A5138, A5139, A5141, A5142) Hash DRBG: (A5138, A5139, A5140, A5141, A5142) HMAC DRBG: (A5138, A5139, A5140, A5141, A5142)
Key pair generation with ECDSA	CKG	Key pair generation using ECDSA	Curves:P-224, P-256, P-384, P-521 with 112, 128, 192, 256 bits of strength Method:B.4.2 Testing Candidates	ECDSA KeyGen (FIPS186-5): (A5138, A5139, A5140, A5141, A5142) Cryptographic Key Generation (CKG): () Key type: Asymmetric
Public key verification with ECDSA	AsymKeyPair-KeyVer	Public key verification using ECDSA	Curves:P-224, P-256, P-384, P-521 with 112, 128, 192, 256 bits of strength	ECDSA KeyVer (FIPS186-5): (A5138, A5139, A5140, A5141, A5142)
Digital signature generation with ECDSA	DigSig-SigGen	Digital signature generation using ECDSA	Curves:P-224, P-256, P-384, P-521 with 112, 128, 192, 256 bits of strength Hash:SHA2-224, SHA2- 256, SHA2-384, SHA2-512,	ECDSA SigGen (FIPS186-5): (A5138, A5139, A5140, A5141, A5142)

Name	Type	Description	Properties	Algorithms
			SHA2- 512/224, SHA2- 512/256, SHA3-224, SHA3-256, SHA3- 384, SHA3-512	
Digital signature verification with ECDSA	DigSig-SigVer	Digital signature verification using ECDSA	Curves:P-224, P-256, P-384, P-521 with 112, 128, 192, 256 bits of strength Hash:SHA2-224, SHA2- 256, SHA2-384, SHA2-512, SHA2- 512/224, SHA2- 512/256, SHA3-224, SHA3-256, SHA3- 384, SHA3-512	ECDSA SigVer (FIPS186-5): (A5138, A5139, A5140, A5141, A5142)
Message authentication code with HMAC	MAC	Message authentication code using HMAC	Keys:112, 192, 256 bits with 112-256 bits of strength Hash:SHA-1, SHA-224, SHA-256, SHA-384, SHA-512, SHA-512/224, SHA-512/256, SHA3-224, SHA3- 256, SHA3-384, SHA3-512	HMAC-SHA-1: (A5137, A5138, A5139, A5140, A5141, A5142) HMAC-SHA2-224: (A5138, A5139, A5140, A5141, A5142) HMAC-SHA2-256: (A5138, A5139, A5140, A5141, A5142) HMAC-SHA2-384: (A5138, A5139, A5140, A5141, A5142) HMAC-SHA2-512: (A5138, A5139, A5140, A5141, A5142) HMAC-SHA2-512/224: (A5138, A5139, A5140, A5141, A5142) HMAC-SHA2-512/256: (A5138, A5139, A5140, A5141, A5142) HMAC-SHA3-

Name	Type	Description	Properties	Algorithms
				224: (A5140, A5141, A5142) HMAC-SHA3-256: (A5140, A5141, A5142) HMAC-SHA3-384: (A5140, A5141, A5142) HMAC-SHA3-512: (A5140, A5141, A5142)
Key derivation with PBKDF	PBKDF	Key derivation using PBKDF	Derived key::112 to 256 bits HMAC:SHA-1, SHA-224, SHA-256, SHA-384, SHA-512, SHA2-512/224, SHA2-512/256, SHA3-224, SHA3-256, SHA3-384, SHA3-512	PBKDF: (A5138, A5139, A5140, A5141, A5142)
Key wrapping with AES	KTS-Wrap	Key wrapping with AES	Keys:128, 192, 256 bits with 128-256 bits of strength Compliance:Compliant with IG D.G AES Mode:KW, CCM	AES-KW: (A5138, A5139, A5141, A5142) AES-CCM: (A5138, A5139, A5141, A5142)
Key unwrapping with AES	KTS-Wrap	Key unwrapping with AES	Keys:128, 192, 256 bits with 128-256 bits of strength Compliance:Compliant with IG D.G AES Mode:KW, CCM	AES-KW: (A5138, A5139, A5141, A5142) AES-CCM: (A5138, A5139, A5141, A5142)
Key pair generation with RSA	CKG	Key pair generation using RSA	Keys:2048, 3072, 4096 with 112, 128, 149 bits of strength Method:B.3.3 Random Probable Primes	RSA KeyGen (FIPS186-5): (A5138, A5139, A5140, A5141, A5142) Cryptographic Key Generation (CKG): () Key type: Asymmetric

Name	Type	Description	Properties	Algorithms
Digital signature generation with RSA	DigSig-SigGen	Digital signature generation using RSA	Padding:PKCS#1v1.5, PSS Hash:SHA-224, SHA-256, SHA-384, SHA-512, SHA2-512/224, SHA2-512/256, SHA3-224, SHA3-256, SHA3-384, SHA3-512 Keys:2048, 3072, 4096 with 112, 128, 149 bits of strength	RSA SigGen (FIPS186-5): (A5138, A5139, A5140, A5141, A5142)
Digital signature verification with RSA	DigSig-SigVer	Digital signature verification using RSA	Padding:PKCS#1v1.5, PSS Hash:SHA-224, SHA-256, SHA-384, SHA-512, SHA2-512/224, SHA2-512/256, SHA3-224, SHA3-256, SHA3-384, SHA3-512 Keys:2048, 3072, 4096 with 112, 128, 149 bits of strength	RSA SigVer (FIPS186-5): (A5138, A5139, A5140, A5141, A5142)
FIPS 186-4 Digital signature verification with RSA	DigSig-SigVer	FIPS 186-4 Digital signature verification using RSA	Padding:PKCS#1v1.5, PSS Hash:SHA-224, SHA-256, SHA-384, SHA-512, SHA2-512/224, SHA2-512/256 Keys:1024 with 80 bits of strength Compliance:FIPS 186-4	RSA SigVer (FIPS186-4): (A5138, A5139, A5140, A5141, A5142)
FIPS 186-2 Digital signature verification with RSA	DigSig-SigVer	FIPS 186-2 Digital signature verification using RSA	Padding:PKCS#1v1.5, PSS Hash:SHA-224, SHA-256, SHA-384, SHA-512 Keys:1536 with 92 bits of strength Compliance:FIPS 186-2	RSA SigVer (FIPS186-2): (A5138, A5139, A5140, A5141, A5142)
Message digest with SHA-3	SHA	Message digest with SHA-3		SHA3-224: (A5140, A5141, A5142)

Name	Type	Description	Properties	Algorithms
				SHA3-256: (A5140, A5141, A5142) SHA3-384: (A5140, A5141, A5142) SHA3-512: (A5140, A5141, A5142) SHAKE-128: (A5140, A5141, A5142) SHAKE-256: (A5140, A5141, A5142)
Message digest with SHA-1	SHA	Message digest using SHA-1		SHA-1: (A5137, A5138, A5139, A5140, A5141, A5142)
Message digest with SHA-2	SHA	Message digest using SHA-2		SHA2-224: (A5138, A5139, A5140, A5141, A5142) SHA2-256: (A5138, A5139, A5140, A5141, A5142) SHA2-384: (A5138, A5139, A5140, A5141, A5142) SHA2-512: (A5138, A5139, A5140, A5141, A5142) SHA2-512/224: (A5138, A5139, A5140, A5141, A5142) SHA2-512/256: (A5138, A5139, A5140, A5141, A5142)

Table 8: Security Function Implementations

2.7 Algorithm Specific Information

AES XTS

The AES algorithm in XTS mode can be only used for the cryptographic protection of data on storage devices, as specified in [SP800-38E]. The length of a single data unit encrypted with the XTS-AES shall not exceed 2^{20} AES blocks, that is 16MB of data.

To meet the requirement stated in IG C.I, the module implements a check that ensures, before performing any cryptographic operation, that the two AES keys used in AES XTS mode are not identical.

The AES-XTS mode shall only be used for the cryptographic protection of data on storage devices. The AES-XTS shall not be used for other purposes, such as the encryption of data in transit.

Key derivation using SP800-132 PBKDF

The module provides password-based key derivation (PBKDF), compliant with SP800-132. The module supports option 1a from Section 5.4 of [SP800-132], in which the Master Key (MK) or a segment of it is used directly as the Data Protection Key (DPK).

In accordance with [SP800-132] and FIPS 140-3 IG D.N, the following requirements shall be met.

- Derived keys shall only be used in storage applications. The Master Key (MK) shall not be used for other purposes. The module accepts length of the MK or DPK of 112 bits or more.
- A portion of the salt, with a length of at least 128 bits, shall be generated randomly using the SP800-90A DRBG.
- The iteration count shall be selected as large as possible, as long as the time required to generate the key using the entered password is acceptable for the users. The minimum value accepted by the module is 1000.
- Passwords or passphrases, used as an input for the PBKDF, shall not be used as cryptographic keys.
- The minimum length of the password or passphrase accepted by the module is 8 characters. The probability of guessing the value, assuming a worst-case scenario of all digits, is estimated to be at most 10^{-8}. Combined with the minimum iteration count as described below, this provides an acceptable trade-off between user experience and security against brute-force attacks.

The calling application shall also observe the rest of the requirements and recommendations specified in [SP800-132].

SHA-1 Use

SHA-1 is only approved when used in approved modes for message digest, HMAC, KDF (PBKDF), and DRBG. The use of SHA-1 for digital signature generation (e.g., ECDSA, RSA) or verification is non-approved.

2.8 RBG and Entropy

Cert Number	Vendor Name
E127	Cloudlinux Inc., TuxCare division

Table 9: Entropy Certificates

Name	Type	Operational Environment	Sample Size	Entropy per Sample	Conditioning Component
Userspace CPU Time Jitter RNG Entropy Source version 3.4.0	Non-Physical	AlmaLinux 9.2 on Amazon Web Services (AWS) m5.metal on Intel Xeon Platinum 8259CL; AlmaLinux 9.2 on Amazon Web Services (AWS) a1.metal on AWS Graviton	64-bits	Full entropy	SHA3-256 (Cert. A4026), HMAC-SHA2-512-DRBG (Cert. A4025)

Table 10: Entropy Sources

The Module provides an SP800-90A-compliant Deterministic Random Bit Generator (DRBG) for creation of key components of asymmetric keys, and random number generation.

The seeding (and automatic reseeding) of the DRBG is done with getrandom().

The DRBG supports the Hash_DRBG, HMAC_DRBG and CTR_DRBG mechanisms. The DRBG is initialized during module initialization; the module loads by default the DRBG using the HMAC_DRBG mechanism with SHA-256 and without prediction resistance. A different DRBG mechanism can be chosen by invoking the gcry_control(GCRYCTL_DRBG_REINIT) function.

The module uses an [SP800-90B]-compliant entropy source specified in the above table. This entropy source is located within the module's physical perimeter but outside of the module's cryptographic boundary. The module obtains 384 bits to seed the DRBG, and 256 bits to reseed it.

The module performs the DRBG health tests as defined in Section 11.3 of [SP800-90A].

2.9 Key Generation

The module provides the following key generation methods:

- Key pair generation with ECDSA (CKG): curves P-224, P-256, P-384, P-521 with method B.4.2 Testing Candidates.
- Key pair generation with RSA (CKG): 2048, 3072, 4096 bit keys with method B.3.3 Random Probable Primes.

2.10 Key Establishment

The module provides the following key establishment methods:

- Key wrapping with AES: 128, 192, 256 bit keys with AES-KW, AES-CCM. Compliant with IG D.G.
- Key unwrapping with AES: 128, 192, 256 bit keys with AES-KW, AES-CCM. Compliant with IG D.G.

2.11 Industry Protocols

The module does not implement industry protocols, therefore this section is not applicable.

3 Cryptographic Module Interfaces

3.1 Ports and Interfaces

Physical Port	Logical Interface(s)	Data That Passes
N/A	Data Input	API input parameters for data.
N/A	Data Output	API output parameters for data.
N/A	Control Input	API function calls, API input parameters for control input, /proc/sys/crypto/fips_enabled control file.
N/A	Status Output	API return codes, API output parameters for status output.

Table 11: Ports and Interfaces

As a software-only module, the module does not have physical ports. The operator can only interact with the module through the API provided by the module. Thus, the physical ports are interpreted to be the physical ports of the hardware platform on which the module runs.

All data output via data output interface is inhibited when the module is performing pre-operational test or zeroization or when the module enters error state.

The module does not implement a control output interface.

4 Roles, Services, and Authentication

4.1 Authentication Methods

The module does not support authentication.

4.2 Roles

Name	Type	Operator Type	Authentication Methods
Crypto Officer	Role	CO	None

Table 12: Roles

The module supports the Crypto Officer role only. This sole role is implicitly and always assumed by the operator of the module.

4.3 Approved Services

Name	Description	Indicator	Inputs	Outputs	Security Functions	SSP Access
Symmetric encryption and decryption	Perform AES encryption and decryption	gcry_control(GCRYCTL_FIPS_SERVICE_INDICATOR_CIPHER, ...) returns GPG_ERR_NO_ERROR	AES key, IV, plaintext/ciphertext	Ciphertext/plaintext	Symmetric encryption and decryption Authenticated symmetric encryption and decryption with AES CCM Symmetric encryption and	Crypto Officer - AES keys: W,E

Name	Description	Indicator	Inputs	Outputs	Security Functions	SSP Access
					decryption with AES XTS (for data storage)	
Key Pair Generation with RSA	Generate a key pair	gcry_control(GCRYCTL_FIPS_SERVICE_INDICATOR_PK_FLAGS, ...) returns GPG_ERR_NO_ERROR	Modulus bits	RSA public key, RSA private key	Key pair generation with RSA	Crypto Officer - RSA Private Key: G,E - RSA Public Key: G,E
Key Pair Generation with ECDSA	Generate a key pair	gcry_control(GCRYCTL_FIPS_SERVICE_INDICATOR_PK_FLAGS, ...) returns GPG_ERR_NO_ERROR	Curve	ECDSA public key, ECDSA private key	Key pair generation with ECDSA	Crypto Officer - ECDSA Private Key: G,E - ECDSA Public

Name	Description	Indicator	Inputs	Outputs	Security Functions	SSP Access
						Key: G,E
Digital signature generation with RSA	Generate a signature	gcry_control(GCRYCTL_FIPS_SERVICE_INDICATOR_PK_FLAGS, ...) or gcry_control(GCRYCTL_FIPS_SERVICE_INDICATOR_MD, ...) return GPG_ERR_NO_ERROR	RSA private key, message	Signature	Digital signature generation with RSA	Crypto Officer - RSA Private Key: W,E
Digital signature generation with ECDSA	Generate a signature	gcry_control(GCRYCTL_FIPS_SERVICE_INDICATOR_PK_FLAGS, ...) or gcry_control(GCRYCTL_FIPS_SERVICE_INDICATOR_MD, ...) return GPG_ERR_NO_ERROR	ECDSA private key, message	Signature	Digital signature generation with ECDSA	Crypto Officer - ECDSA Private Key: W,E
Digital signature verification with RSA	Verify a signature	gcry_control(GCRYCTL_FIPS_SERVICE_INDICATOR_PK_FLAGS, ...) or gcry_control(GCRYCTL_FIPS_SERVICE_INDICATOR_MD, ...) return GPG_ERR_NO_ERROR	RSA public key, message, signature	Pass/fail	Digital signature verification with RSA FIPS 186-4 Digital signature verification with RSA FIPS 186-2	Crypto Officer - RSA Public Key: W,E

Name	Description	Indicator	Inputs	Outputs	Security Functions	SSP Access
					Digital signature verification with RSA	
Digital signature verification with ECDSA	Verify a signature	gcry_control(GCRYCTL_FIPS_SERVICE_INDICATOR_PK_FLAGS, ...) or gcry_control(GCRYCTL_FIPS_SERVICE_INDICATOR_MD, ...) return GPG_ERR_NO_ERROR	ECDSA public key, message, signature	Pass/fail	Digital signature verification with ECDSA	Crypto Officer - ECDSA Public Key: W,E
Public key verification	Verify ECDSA public key	gcry_mpi_ec_curve_point() returns GPG_ERR_NO_ERROR	ECDSA public key	Pass/fail	Public key verification with ECDSA	Crypto Officer - ECDSA Public Key: W,E
Random Number Generation with CTR_DRBG/ HMAC_DRBG	Generate random bitstrings from CTR_DRBG/ HMAC_DRBG	gcry_randomize(), gcry_random_bytes(), gcry_random_bytes_secure() return GPG_ERR_NO_ERROR	Output length	Random bytes	Random number generation	Crypto Officer - Entropy Input: W,E - DRB

Name	Description	Indicator	Inputs	Outputs	Security Functions	SSP Access
						G seed: G,E - DRBG internal state (V value, Key): G,W,E
Random Number Generation with Hash_DRBG	Generate random bitstrings from Hash_DRBG	gcry_randomize(), gcry_random_bytes(), gcry_random_bytes_secure() return GPG_ERR_NO_ERROR	Output length	Random bytes	Random number generation	Crypto Officer - Entropy Input: W,E - DRBG seed: G,E - DRBG internal state (V value, C value):

Name	Description	Indicator	Inputs	Outputs	Security Functions	SSP Access
						G,W,E
Message digest	Compute SHA hashes	gcry_control(GCRYCTL_FIPS_SERVICE_INDICATOR_MD, ...) returns GPG_ERR_NO_ERROR	Message	Digest value	Message digest with SHA-3 Message digest with SHA-1 Message digest with SHA-2	Crypto Officer
Message authentication code (MAC) with HMAC	Compute HMAC	gcry_control(GCRYCTL_FIPS_SERVICE_INDICATOR_MAC, ...) returns GPG_ERR_NO_ERROR	HMAC key	MAC tag	Message authentication code with HMAC	Crypto Officer - HMAC keys: W,E
Message authentication code (MAC) with CMAC	Compute AES-based CMAC	gcry_control(GCRYCTL_FIPS_SERVICE_INDICATOR_MAC, ...) returns GPG_ERR_NO_ERROR	AES key	MAC tag	MAC generation and verification	Crypto Officer - AES keys: W,E
Key wrapping and unwrapping	Perform AES-based key wrapping/unwrapping	gcry_control(GCRYCTL_FIPS_SERVICE_INDICATOR_CIPHER, ...) returns GPG_ERR_NO_ERROR	AES key, any CSP/wrapped CSP	Wrapped CSP/Unwrapped CSP	Key wrapping with AES Key unwra	Crypto Officer - AES

Name	Description	Indicator	Inputs	Outputs	Security Functions	SSP Access
					pping with AES	keys: W,E
Key derivation	Perform key derivation	gcry_control(GCRYCTL_FIPS_SERVICE_INDICATOR_KDF, ...) returns GPG_ERR_NO_ERROR	Password, salt, iteration count	Derived key	Key derivation with PBKDF	Crypto Officer - Password or passphrase: W,E - Derived key: G
On-demand Integrity test	Perform on-demand integrity test	N/A	N/A	Pass/fail	Message authentication code with HMAC	Crypto Officer
Show status	Show module status	N/A	N/A	Module status	None	Crypto Officer
Zeroization	Zeroize all SSPs	N/A	Any SSP	N/A	None	Crypto Officer
Self-tests	Perform self-tests	N/A	N/A	Pass/fail	None	Crypto Officer

Name	Description	Indicator	Inputs	Outputs	Security Functions	SSP Access
Show module name and version	Show module name and version	N/A	N/A	Module name and version information	None	Crypto Officer

Table 13: Approved Services

The table above lists the approved services. For each service, the table lists the associated cryptographic algorithm(s), the role to perform the service, the cryptographic keys or CSPs involved, and their access type(s). The following convention is used to specify access rights to a CSP:

- **G** = **Generate**: The module generates or derives the SSP.
- **R** = **Read**: The SSP is read from the module (e.g., the SSP is output).
- **W** = **Write**: The SSP is updated, imported, or written to the module.
- **E** = **Execute**: The module uses the SSP in performing a cryptographic operation.
- **Z** = **Zeroise**: The module zeroises the SSP.
- **N/A**: the calling application does not access any CSP or key during its operation.

The details of the approved cryptographic algorithms including the CAVP certificate numbers can be found in the Approved Algorithm table. In order to check whether it utilizes an approved security function or not, the operator is responsible to invoke the gcry_control() API along with dedicated controls in the form of API input parameters.

The module implements the following controls depending on the requested service:

1. GCRYCTL_FIPS_SERVICE_INDICATOR_CIPHER - For symmetric algorithms and the related modes.
2. GCRYCTL_FIPS_SERVICE_INDICATOR_KDF - For KDF operations.
3. GCRYCTL_FIPS_SERVICE_INDICATOR_PK_FLAGS - For asymmetric operations.[1]
4. GCRYCTL_FIPS_SERVICE_INDICATOR_MD - For digest operations.
5. GCRYCTL_FIPS_SERVICE_INDICATOR_MAC - For MAC operations.

In addition to that, for the below-mentioned services, the approved service indicator corresponds to the GPG_ERR_NO_ERROR returned from listed functions in the indicator column below. They don't use gcry_control() API:

1. *Random number generation* service: gcry_randomize(), gcry_random_bytes(), gcry_random_bytes_secure().
2. *Public key validation* service: gcry_mpi_ec_curve_point().

[1] The list of public key flags allowed in approved mode of operation is described in Section 4.6 Additional Information.

For all approved services, GPG_ERR_NO_ERROR (i.e., “0”) return code indicates the service is approved. In case the above-mentioned controls are used in conjunction, the operator is responsible to check that all of the called functions return GPG_ERR_NO_ERROR (i.e., “0”). For all non-approved services, "non-zero" return code indicates the service is not approved.

4.4 Non-Approved Services

Name	Description	Algorithms	Role
Symmetric encryption/decryption	AES encryption/decryption using non-approved AES modes	AES-GCM, AES-GCM-SIV, AES-OCB, AES-EAX	CO
Message digest	Non-approved message digest	MD5	CO
Shared Secret Computation	ECDH Shared Secret Computation	ECDH	CO
Key generation with RSA	Generate RSA key pairs using public key flags not listed in section 4.6.	RSA using public key flags not listed in section 4.6	CO
Key generation with ECDSA	Generate ECDSA key pairs using public key flags not listed in section 4.6.	ECDSA using public key flags not listed in section 4.6	CO
Digital signature generation/verification with RSA	Generate/verify a signature using RSA Signature generation/verification primitives	RSA	CO
Digital signature generation/verification with ECDSA	Generate/verify a signature using ECDSA Signature generation/verification primitives	ECDSA	CO
Asymmetric encryption/decryption	Perform encryption/decryption using RSA encryption/decryption primitives	RSA	CO

Table 14: Non-Approved Services

The table above lists the non-approved services. For the services listed below, the module implements an additional service indicator in the form of a control named GCRYCTL_FIPS_SERVICE_INDICATOR_FUNCTION. The operator is responsible to invoke the gcry_control() API along with the following input parameters: GCRYCTL_FIPS_SERVICE_INDICATOR_FUNCTION control; the name of the API[2] representing the service.

4.5 External Software/Firmware Loaded

The module does not have the capability of loading software or firmware from an external source.

4.6 Additional Information

Below are listed the approved public key flags for an input s-expression:

[2] The list of APIs supported by the module can be found in the documentation included in the optional *libgcrypt-devel* package.

curve	d	data	e	ecdsa	flags	sig-val
genkey	hash	n	nbits	pkcs1	private-key	value
pss	public-key	q	r	raw	rsa	salt-length
rsa-use-e	s					

5 Software/Firmware Security

5.1 Integrity Techniques

The integrity of the module is verified comparing the HMAC-SHA-256 value calculated at run time with the HMAC-SHA-256 value embedded in the module's ELF header that was computed at build time for each software component of the module. If the HMAC values do not match, the test fails and the module enters the error state.

5.2 Initiate on Demand

Integrity tests are performed as part of the Pre-Operational Self-Tests.

The module provides the Self-Test service to perform self-tests on demand which includes the pre-operational tests (i.e., integrity test) and cryptographic algorithm self-tests (CASTs). This service can be invoked relying on the gcry_control(GCRYCTL_SELFTEST) API function call or by powering-off and reloading the module. During the execution of the on-demand self-tests, services are not available, and no data output or input is possible.

In order to verify whether the self-tests have succeeded and the module is in the Operational state, the calling application may invoke the gcry_control(GCRYCTL_OPERATIONAL_P). The function will return TRUE if the module is in the operational state, FALSE if the module is in the Error state.

6 Operational Environment

6.1 Operational Environment Type and Requirements

Type of Operational Environment: Modifiable

How Requirements are Satisfied:

The module should be compiled and installed as stated in section 11. The user should confirm that the module is installed correctly by running:

1. fips-mode-setup --check command to verify that the system is operating in Approved mode
2. check the output of the gcry_get_config() API, which should output *Libgcrypt cryptography module for AlmaLinux 9 1.10.0-9a1db72d64086a2f*

The module does not support concurrent operators.

6.2 Configuration Settings and Restrictions

Instrumentation tools like the ptrace system call, gdb and strace, userspace live patching, as well as other tracing mechanisms offered by the Linux environment such as ftrace or systemtap, shall not be used in the operational environment. The use of any of these tools implies that the cryptographic module is running in a non-validated operational environment.

6.3 Additional Information

The module shall be installed as stated in Section 11. If properly installed, the operating system provides process isolation and memory protection mechanisms that ensure appropriate separation for memory access among the processes on the system. Each process has control over its own data and uncontrolled access to the data of other processes is prevented.

7 Physical Security

The module is comprised of software only and therefore this section is not applicable.

8 Non-Invasive Security

This module does not implement any non-invasive security mechanism, and therefore this Section is not applicable.

9 Sensitive Security Parameters Management

9.1 Storage Areas

Storage Area Name	Description	Persistence Type
RAM	Temporary storage for SSPs used by the module as part of service execution. The module does not perform persistent storage of SSPs	Dynamic

Table 15: Storage Areas

The module does not perform persistent storage of SSPs. The SSPs are temporarily stored in RAM in plaintext form. SSPs are provided to the module by the calling process and are destroyed when released by the appropriate zeroization function calls.

9.2 SSP Input-Output Methods

Name	From	To	Format Type	Distribution Type	Entry Type	SFI or Algorithm
API input parameters (plaintext)	Calling application within TOEPP	Cryptographic module	Plaintext	Manual	Electronic	
API output parameters (plaintext)	Cryptographic module	Calling application within TOEPP	Plaintext	Manual	Electronic	

Table 16: SSP Input-Output Methods

The module does not support manual SSP entry or intermediate SSP generation output. The SSPs are provided to the module via API input parameters in plaintext form and output via API output parameters in plaintext form within the physical perimeter of the operational environment. This is allowed by [FIPS140-3_IG] 9.5.A, according to the “CM Software to/from App via TOEPP Path” entry on the Key Establishment Table.

9.3 SSP Zeroization Methods

Zeroization Method	Description	Rationale	Operator Initiation
Wipe and Free memory block allocated	Zeroizes the SSPs contained within the cipher handle.	Memory occupied by SSPs is overwritten with zeroes and then it is released, which renders the SSP values irretrievable. The completion of the zeroization routine indicates that the zeroization procedure succeeded.	By calling the cipher related zeroization API which are the following: gcry_free(), gcry_cipher_close(), gcry_mac_close(), gcry_sexp_release(), gcry_mpi_release(), gcry_ctx_release(), gcry_mpi_point_release(), gcry_ctrl(GCRYCTL_TE RM_SECMEM)

Zeroization Method	Description	Rationale	Operator Initiation
Automatic	Automatically zeroized by the module when no longer needed	Memory occupied by SSPs is overwritten with zeroes, which renders the SSP values irretrievable.	N/A
Module Reset	De-allocates the volatile memory used to store SSPs	Volatile memory used by the module is overwritten within nanoseconds when power is removed.	By unloading and reloading the module

Table 17: SSP Zeroization Methods

The memory occupied by SSPs is allocated by regular memory allocation operating system calls. The application that is acting as the CO is responsible for calling the appropriate zeroization functions provided in the module's API and listed in the above table. Calling gcry_free(), which will zeroize the SSPs and also invoke the corresponding API functions listed in the above table to zeroize SSPs. The zeroization functions overwrite the memory occupied by SSPs with “zeros” and deallocate the memory with the regular memory deallocation operating system call. In case of abnormal termination, or swap in/out of a physical memory page of a process, the keys in physical memory are overwritten by the Linux kernel before the physical memory is allocated to another process. The completion of a zeroization routine(s) will indicate that a zeroization procedure succeeded.

9.4 SSPs

Name	Description	Size - Strength	Type - Category	Generated By	Established By	Used By
AES keys	AES key used for encryption, decryption, and computing MAC tags	AES-XTS: 128, 256; Other modes: 128, 192, 256 - AES-XTS: 128, 256; Other modes: 128, 192, 256	Symmetric key - CSP			Symmetric encryption and decryption MAC generation and verification Authenticated symmetric encryption and decryption with AES CCM Symmetric encryption and decryption with AES XTS (for data storage)
HMAC keys	HMAC key used for	112-256 bits - 112-256 bits	Symmetric key - CSP			Message authentication

Name	Description	Size - Strength	Type - Category	Generated By	Established By	Used By
	computing MAC tags					code with HMAC
RSA Private Key	Private key used for RSA signature generation	2048, 3072, 4096 bits - 112, 128, 149 bits	Private key - CSP	Key pair generation with RSA		Digital signature generation with RSA
RSA Public Key	Public key used for RSA signature verification	FIPS 186-5: 2048, 3072, 4096 bits bits; FIPS 186-4: 1024 bits; FIPS 186-2: 1536 bits - FIPS 186-5: 112, 128, 149 bits; FIPS 186-4: 80 bits; FIPS 186-2: 96 bits	Public key - PSP	Key pair generation with RSA		Digital signature verification with RSA FIPS 186-4 Digital signature verification with RSA FIPS 186-2 Digital signature verification with RSA
ECDSA Private Key	Private key used for ECDSA signature generation	P-224, P-256, P-384, P-521 - 112, 128, 192, 256 bits	Private key - CSP	Key pair generation with ECDSA		Public key verification with ECDSA Digital signature generation with ECDSA
ECDSA Public Key	Public key used for ECDSA signature verification	P-224, P-256, P-384, P-521 - 112, 128, 192, 256 bits	Public key - PSP	Key pair generation with ECDSA		Digital signature verification with ECDSA
Password or passphrase	Password used to derive symmetric keys	Minimum of 8 character - N/A	Password - CSP			Key derivation with PBKDF
Derived key	Symmetric key derived from a key derivation key, shared secret, or password	112-4096 bits - 112-256 bits	Symmetric key - CSP	Key derivation with PBKDF		

Name	Description	Size - Strength	Type - Category	Generated By	Established By	Used By
Entropy Input	Entropy input used to seed the DRBG	128-384 bits - 128-384 bits	Entropy input - CSP			Random number generation
DRBG internal state (V value, C value)	Internal state of the Hash_DRBG	880, 1776 bits - 128, 256 bits	Internal state - CSP	Random number generation		Random number generation
DRBG internal state (V value, Key)	Internal state of the CTR_DRBG and HMAC_DRBG	CTR_DRBG: 256, 320, 384 bits; HMAC_DRBG: 320, 512, 1024 bits - CTR_DRBG: 128, 192, 256 bits; HMAC_DRBG: 128, 256 bits	Internal state - CSP	Random number generation		Random number generation
DRBG seed	DRBG seed derived from entropy input as defined in SP 800-90Ar1	CTR_DRBG: 256, 320, 384 bits; HMAC_DBRG: 440, 888 bits; Hash_DRBG: 440, 888 bits - CTR_DRBG: 128, 192, 256 bits; HMAC_DRBG: 128, 256 bits; Hash_DRBG: 128, 256 bits	Seed - CSP	Random number generation		Random number generation

Table 18: SSP Table 1

Name	Input - Output	Storage	Storage Duration	Zeroization	Related SSPs
AES keys	API input parameters (plaintext)	RAM:Plaintext	From service invocation to service completion	Wipe and Free memory block allocated Module Reset	
HMAC keys	API input parameters (plaintext)	RAM:Plaintext	From service invocation to service completion	Wipe and Free memory block allocated Module Reset	
RSA Private Key	API input parameters	RAM:Plaintext	From service invocation to	Wipe and Free memory block	RSA Public Key:Paired With

Table 19: SSP Table 2

The tables above summarizes the Sensitive Security Parameters (SSPs) that are used by the cryptographic services implemented in the module.

9.5 Transitions

The SHA-1 algorithm as implemented by the module will be non-approved for all purposes, starting January 1, 2030.

10 Self-Tests

10.1 Pre-Operational Self-Tests

Algorithm or Test	Test Properties	Test Method	Test Type	Indicator	Details
HMAC-SHA2-256 (A5138)	256-bit key	Message authentication	SW/FW Integrity	Module becomes operational and services are available for use	Integrity test for /usr/lib64/libgcrypt.so.20.4.0
HMAC-SHA2-256 (A5139)	256-bit key	Message authentication	SW/FW Integrity	Module becomes operational and services are available for use	Integrity test for /usr/lib64/libgcrypt.so.20.4.0
HMAC-SHA2-256 (A5140)	256-bit key	Message authentication	SW/FW Integrity	Module becomes operational and services are available for use	Integrity test for /usr/lib64/libgcrypt.so.20.4.0
HMAC-SHA2-256 (A5141)	256-bit key	Message authentication	SW/FW Integrity	Module becomes operational and services are available for use	Integrity test for /usr/lib64/libgcrypt.so.20.4.0
HMAC-SHA2-256 (A5142)	256-bit key	Message authentication	SW/FW Integrity	Module becomes operational and services are available for use	Integrity test for /usr/lib64/libgcrypt.so.20.4.0

Table 20: Pre-Operational Self-Tests

The module performs pre-operational self-tests automatically when the module is becoming available for the consuming application. Pre-operational self-tests ensure that the module is not corrupted. While the module is executing the pre-operational self-tests, services are not available, input and output are inhibited. The module is not available for use by the calling application until the pre-operational self-tests are completed successfully. After the pre-operational self-tests and the CASTs succeed, the module becomes operational. If any of the pre-operational self-tests or any of the CASTs fail an error message is returned, and the module transitions to the error state.

10.2 Conditional Self-Tests

Algorithm or Test	Test Properties	Test Method	Test Type	Indicator	Details	Conditions
SHA-1 (A5137)	N/A	KAT	CAST	Module is operational	Message digest	Power up
SHA-1 (A5138)	N/A	KAT	CAST	Module is operational	Message digest	Power up

Algorithm or Test	Test Properties	Test Method	Test Type	Indicator	Details	Conditions
SHA-1 (A5139)	N/A	KAT	CAST	Module is operational	Message digest	Power up
SHA-1 (A5140)	N/A	KAT	CAST	Module is operational	Message digest	Power up
SHA-1 (A5141)	N/A	KAT	CAST	Module is operational	Message digest	Power up
SHA-1 (A5142)	N/A	KAT	CAST	Module is operational	Message digest	Power up
AES-ECB - Encrypt (A5138)	128, 192, 256-bit key	KAT	CAST	Module is operational	Encryption	Power up
AES-ECB - Encrypt (A5139)	128, 192, 256-bit key	KAT	CAST	Module is operational	Encryption	Power up
AES-ECB - Encrypt (A5141)	128, 192, 256-bit key	KAT	CAST	Module is operational	Encryption	Power up
AES-ECB - Encrypt (A5142)	128, 192, 256-bit key	KAT	CAST	Module is operational	Encryption	Power up
AES-ECB - Decrypt (A5138)	128, 192, 256-bit key	KAT	CAST	Module is operational	Decryption	Power up
AES-ECB - Decrypt (A5139)	128, 192, 256-bit key	KAT	CAST	Module is operational	Decryption	Power up
AES-ECB - Decrypt (A5141)	128, 192, 256-bit key	KAT	CAST	Module is operational	Decryption	Power up
AES-ECB - Decrypt (A5142)	128, 192, 256-bit key	KAT	CAST	Module is operational	Decryption	Power up
AES-CMAC (A5138)	128-bit key	KAT	CAST	Module is operational	MAC generation	Power up
AES-CMAC (A5139)	128-bit key	KAT	CAST	Module is operational	MAC generation	Power up

Algorithm or Test	Test Properties	Test Method	Test Type	Indicator	Details	Conditions
AES-CMAC (A5141)	128-bit key	KAT	CAST	Module is operational	MAC generation	Power up
AES-CMAC (A5142)	128-bit key	KAT	CAST	Module is operational	MAC generation	Power up
Counter DRBG (A5138)	AES with 128-bit key with DF, with and without PR	KAT	CAST	Module is operational	Instantiate Generate; Reseed Generate	Power up
Counter DRBG (A5139)	AES with 128-bit key with DF, with and without PR	KAT	CAST	Module is operational	Instantiate Generate; Reseed Generate	Power up
Counter DRBG (A5141)	AES with 128-bit key with DF, with and without PR	KAT	CAST	Module is operational	Instantiate Generate; Reseed Generate	Power up
Counter DRBG (A5142)	AES with 128-bit key with DF, with and without PR	KAT	CAST	Module is operational	Instantiate Generate; Reseed Generate	Power up
Hash DRBG (A5138)	SHA-1 without PR and SHA-256 with and without PR	KAT	CAST	Module is operation	Instantiate Generate; Reseed Generate	Power up
Hash DRBG (A5139)	SHA-1 without PR and SHA-256 with and without PR	KAT	CAST	Module is operation	Instantiate Generate; Reseed Generate	Power up
Hash DRBG (A5140)	SHA-1 without PR and SHA-256 with and without PR	KAT	CAST	Module is operation	Instantiate Generate; Reseed Generate	Power up
Hash DRBG (A5141)	SHA-1 without PR and SHA-256 with and without PR	KAT	CAST	Module is operation	Instantiate Generate; Reseed Generate	Power up
Hash DRBG (A5142)	SHA-1 without PR and SHA-256 with and without PR	KAT	CAST	Module is operation	Instantiate Generate;	Power up

Algorithm or Test	Test Properties	Test Method	Test Type	Indicator	Details	Conditions
					Reseed Generate	
HMAC DRBG (A5138)	SHA-256 with and without PR	KAT	CAST	Module is operational	Instantiate Generate; Reseed Generate	Power up
HMAC DRBG (A5139)	SHA-256 with and without PR	KAT	CAST	Module is operational	Instantiate Generate; Reseed Generate	Power up
HMAC DRBG (A5140)	SHA-256 with and without PR	KAT	CAST	Module is operational	Instantiate Generate; Reseed Generate	Power up
HMAC DRBG (A5141)	SHA-256 with and without PR	KAT	CAST	Module is operational	Instantiate Generate; Reseed Generate	Power up
HMAC DRBG (A5142)	SHA-256 with and without PR	KAT	CAST	Module is operational	Instantiate Generate; Reseed Generate	Power up
ECDSA SigGen (FIPS186-5) (A5138)	P-256 and SHA-256	KAT	CAST	Module is operational	Signature generation and verification	Power up
ECDSA SigGen (FIPS186-5) (A5139)	P-256 and SHA-256	KAT	CAST	Module is operational	Signature generation and verification	Power up
ECDSA SigGen (FIPS186-5) (A5140)	P-256 and SHA-256	KAT	CAST	Module is operational	Signature generation and verification	Power up

Table 23: Conditional Periodic Information

This information can be found in Section 5.2.

10.4 Error States

Name	Description	Conditions	Recovery Method	Indicator
Error State	The module will return an error code to indicate the error and will enter the Error state. Any further cryptographic operation is inhibited.	Failure of pre-operational tests or conditional tests.	The error can be recovered by a restart (i.e., powering off and powering on) of the module.	An error message related to the cause of the failure (e.g. GPG_ERR_SELFTEST_FAILED).
Fatal Error state	The module will abort and will not be available.	Random numbers are requested in the error state or cipher operations are requested on a deallocated handle.	The error can be recovered by a restart (i.e., powering off and powering on) of the module.	The module is aborted

Table 24: Error States

When the module fails any pre-operational self-test or conditional test, the module will return an error code to indicate the error and will enter the Error state. Any further cryptographic operation is inhibited. The calling application can obtain the module state by calling the gcry_control(GCRYCTL_OPERATIONAL_P) API function. The function returns FALSE if the module is in the Error state, TRUE if the module is in the Operational state.

In the Error state, all data output is inhibited, and no cryptographic operation is allowed. The error can be recovered by a restart (i.e., powering off and powering on) of the module.

If random numbers are requested while the module is in Error state, or if cipher operations are requested on a deallocated handle the module will transition to Fatal Error state, the module will abort and will not be available.

10.5 Operator Initiation of Self-Tests

The software integrity tests and the CASTs can be invoked relying on the gcry_control(GCRYCTL_SELFTEST) API function call or by powering-off and reloading the module. The PCTs can be invoked on demand by requesting the Key Generation service.

11 Life-Cycle Assurance

11.1 Installation, Initialization, and Startup Procedures

The Crypto Officer can install the libgcrypt-1.10.0-11.el9_2.tuxcare.1 RPM package of the Module using standard tools recommended for the installation of RPM packages on an Almalinux system (for example, DNF or RPM). The integrity of the RPM package is automatically verified during the installation, and the Crypto Officer shall not install the RPM package if there is any integrity error.

Before the RPM package of the module is installed, the Almalinux 9 system must operate in Approved mode. This can be achieved by:

- Starting the installation in Approved mode. Add the fips=1 option to the kernel command line during the system installation. During the software selection stage, do not install any third-party software.
- Switching the system into Approved mode after the installation. Execute the fips-mode-setup --enable command. Restart the system.

The Crypto Officer must verify the system operates in Approved mode by executing the fips-mode-setup --check command, which should output "FIPS mode is enabled."

After installation of the RPM package of the module, the operator needs to check the output of the gcry_get_config() API, which should include the following name and version:

Libgcrypt cryptography module for AlmaLinux 9 1.10.0-9a1db72d64086a2f

Once libgcrypt has been put into Approved mode, it is not possible to switch back to standard mode without terminating the process first. If the logging verbosity level of libgcrypt has been set to at least 2, the state transitions and the self-tests are logged.

11.2 Administrator Guidance

All the functions, ports and logical interfaces described in this document are available to the Crypto Officer.

The user must not call malloc/free to create/release space for keys, let libgcrypt manage space for keys, which will ensure that the key memory is overwritten before it is released.

gcry_control(GCRYCTL_TERM_SECMEM) needs to be called before the process is terminated.

11.3 Non-Administrator Guidance

The module implements only the Crypto Officer. There are no requirements for non-administrator guidance.

11.4 End of Life

For secure sanitization of the cryptographic module, the module must first to be powered off, which will zeroize all keys and CSPs in volatile memory. Then, for actual deprecation, the module shall be upgraded to a newer version that is FIPS 140-3 validated.

The module does not possess persistent storage of SSPs, so further sanitization steps are not required.

12 Mitigation of Other Attacks

12.1 Attack List

RSA timing attacks.

12.2 Mitigation Effectiveness

RSA is vulnerable to timing attacks. In a setup where attackers can measure the time of RSA decryption or signature operations, blinding must be used to protect the RSA operation from that attack.

By default, the module uses the following blinding technique: instead of using the RSA decryption directly, a blinded value $y = x\, r^e \ mod\ n$ is decrypted and the unblinded value $x' = y'\, r^{-1} \ mod\ n$ returned.

The blinding value r is a random value with the size of the modulus *n*.

Appendix A. Glossary and Abbreviations

AES	Advanced Encryption Standard
CAVP	Cryptographic Algorithm Validation Program
CBC	Cipher Block Chaining
CMAC	Cipher-based Message Authentication Code
CMVP	Cryptographic Module Validation Program
CSP	Critical Security Parameter
CTR	Counter Mode
DRBG	Deterministic Random Bit Generator
ECB	Electronic Code Book
FIPS	Federal Information Processing Standards Publication
GCM	Galois Counter Mode
HMAC	Hash Message Authentication Code
KAT	Known Answer Test
KW	AES Key Wrap
MAC	Message Authentication Code
NIST	National Institute of Science and Technology
PAA	Processor Algorithm Acceleration
PAI	Processor Algorithm Implementation
PR	Prediction Resistance
PSP	Public Security Parameter
PSS	Probabilistic Signature Scheme
RNG	Random Number Generator
RSA	Rivest, Shamir, Adleman
SHA	Secure Hash Algorithm
SSP	Sensitive Security Parameter
XTS	XEX-based Tweaked-codebook mode with cipher text Stealing
