1 General

1.1 Overview

This document is the non-proprietary FIPS 140-3 Security Policy for version 5.15.0-73-fips of the Canonical Ltd. Ubuntu 22.04 Kernel Crypto API Cryptographic Module. It contains the security rules under which the module must operate and describes how this module meets the requirements as specified in FIPS PUB 140-3 (Federal Information Processing Standards Publication 140-3) for an overall Security Level 1 module.

This Non-Proprietary Security Policy may be reproduced and distributed, but only whole and intact and including this notice. Other documentation is proprietary to their authors.

1.3 Additional Information

The vendor has provided the non-proprietary Security Policy of the cryptographic module, which was further consolidated into this document by atsec information security together with other vendor-supplied documentation. In preparing the Security Policy document, the laboratory formatted the vendor-supplied documentation for consolidation without altering the technical statements therein contained. The further refining of the Security Policy document was conducted iteratively throughout the conformance testing, wherein the Security Policy was submitted to the vendor, who would then edit, modify, and add technical contents. The vendor would also supply additional documentation, which the laboratory formatted into the existing Security Policy, and resubmitted to the vendor for their final editing.

2 Cryptographic Module Specification

2.1 Description

Purpose and Use: The Canonical Ltd. Ubuntu 22.04 Kernel Crypto API Cryptographic Module (hereafter referred to as "the module") provides a C language application program interface (API) for use by other (kernel space and user space) processes that require cryptographic functionality. The module operates on a general-purpose computer as part of the Linux kernel. Its cryptographic functionality can be accessed using the Linux Kernel Crypto API.
Module Type: Software
Module Embodiment: MultiChipStand
Module Characteristics:

Cryptographic Boundary: The cryptographic boundary of the module is defined as the kernel binary and the kernel crypto object files, the libkcapi library, and the sha512hmac binary, which is used to verify the integrity of the software components. In addition, the cryptographic boundary contains the .hmac files which store the expected integrity values for each of the software components.

Tested Operational Environment's Physical Perimeter (TOEPP): The TOEPP of the module is defined as the general-purpose computer on which the module is installed.

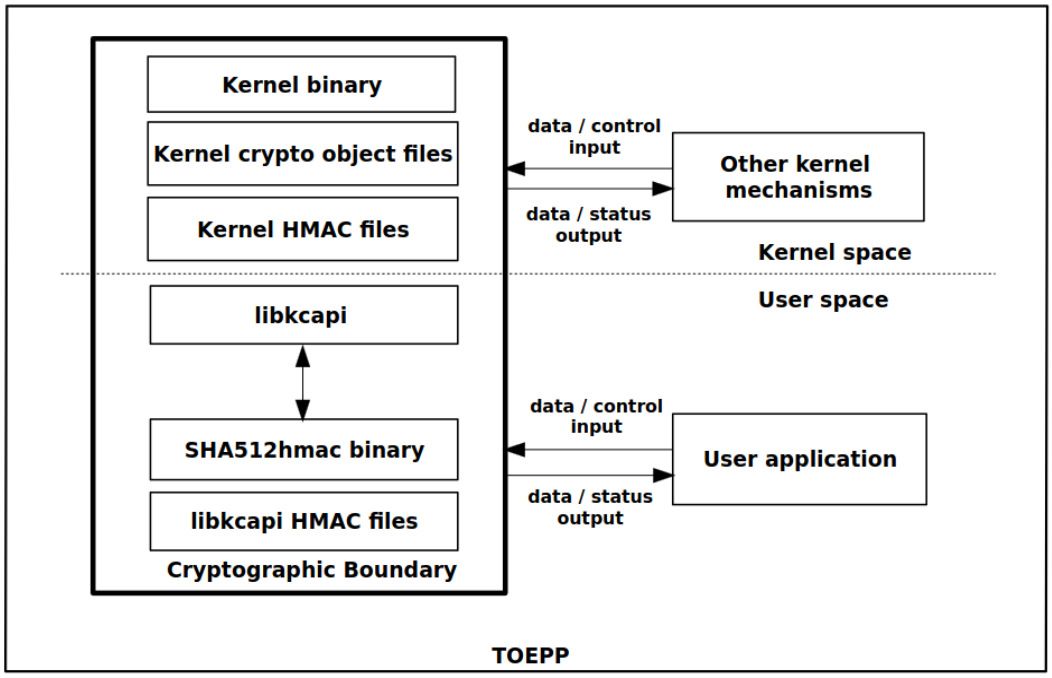

Figure 1: Block Diagram

2.2 Tested and Vendor Affirmed Module Version and Identification

Tested Module Identification – Hardware:

N/A for this module.

Tested Module Identification – Software, Firmware, Hybrid (Executable Code Sets):

Package or File Name	Software/ Firmware Version	Features	Integrity Test
/boot/vmlinuz-5.15.0-73-fips; /run/mnt/kernel/kernel.efi	5.15.0-73-fips	N/A	HMAC SHA-512
*.ko files in /usr/lib/modules/5.15.0-73-fips/kernel/crypto/; *.ko files in /usr/lib/modules/5.15.0-73-fips/kernel/arch/x86/crypto/; *.ko files in /usr/lib/modules/5.15.0-73-fips/kernel/arch/arm64/crypto/; *.ko files in /usr/lib/modules/5.15.0-73-fips/kernel/arch/s390/crypto/	5.15.0-73-fips	N/A	RSA signature verification
/usr/lib/*-linux-gnu/libkcapi.so.1.4.0; /usr/bin/sha512hmac	1.4.0-1ubuntu0.1~Fips1	N/A	HMAC SHA-256 (/usr/lib/*-linux-gnu/libkcapi.so.1.4.0); HMAC SHA-512 (/usr/bin/sha512hmac)

Table 2: Tested Module Identification – Software, Firmware, Hybrid (Executable Code Sets)

Tested Module Identification – Hybrid Disjoint Hardware:

N/A for this module.

Tested Operational Environments - Software, Firmware, Hybrid:

The module makes use of hardware acceleration provided by the hardware platform. Namely, AES-NI and SHA extensions from the Intel based platform, NEON and Cryptography Extensions for the Graviton2 based platform, and CPACF for the z15 based platform, listed in the Tested Operational Environments - Software, Firmware, Hybrid table. CPACF is considered as PAI. AES-NI, SHA extensions, NEON, and Cryptography Extensions are considered as PAA.

Operating System	Hardware Platform	Processors	PAA/PAI	Hypervisor or Host OS	Version(s)
Ubuntu 22.04 LTS 64-bit	Supermicro SYS-1019P-WTR	Intel(R) Xeon(R) Gold 6226	Yes	N/A	5.15.0-73-fips
Ubuntu 22.04 LTS 64-bit	Supermicro SYS-1019P-WTR	Intel(R) Xeon(R) Gold 6226	No	N/A	5.15.0-73-fips
Ubuntu Core 22 64-bit	Supermicro SYS-1019P-WTR	Intel(R) Xeon(R) Gold 6226	Yes	N/A	5.15.0-73-fips
Ubuntu Core 22 64-bit	Supermicro SYS-1019P-WTR	Intel(R) Xeon(R) Gold 6226	No	N/A	5.15.0-73-fips
Ubuntu 22.04 LTS 64-bit	Amazon Web Services (AWS) c6g.metal	AWS Graviton2	Yes	N/A	5.15.0-73-fips

Operating System	Hardware Platform	Processors	PAA/PAI	Hypervisor or Host OS	Version(s)
Ubuntu 22.04 LTS 64-bit	Amazon Web Services (AWS) c6g.metal	AWS Graviton2	No	N/A	5.15.0-73-fips
Ubuntu Core 22 64-bit	Amazon Web Services (AWS) c6g.metal	AWS Graviton2	Yes	N/A	5.15.0-73-fips
Ubuntu Core 22 64-bit	Amazon Web Services (AWS) c6g.metal	AWS Graviton2	No	N/A	5.15.0-73-fips
Ubuntu 22.04 LTS 64-bit	IBM z15	IBM z15	Yes	N/A	5.15.0-73-fips
Ubuntu 22.04 LTS 64-bit	IBM z15	IBM z15	No	N/A	5.15.0-73-fips

Table 3: Tested Operational Environments - Software, Firmware, Hybrid

Vendor-Affirmed Operational Environments - Software, Firmware, Hybrid:
N/A for this module.

CMVP makes no statement as to the correct operation of the module or the security strengths of the generated keys when so ported if the specific operational environment is not listed on the validation certificate.

2.3 Excluded Components

Not applicable.

2.4 Modes of Operation

Modes List and Description:

Mode Name	Description	Type	Status Indicator
Approved mode	Automatically entered whenever an approved service is requested	Approved	Equivalent to the indicator of the requested service defined in section 4.3
Non-approved mode	Automatically entered whenever a non-approved service is requested	Non-Approved	Equivalent to the indicator of the requested service defined in section 4.3

Table 4: Modes List and Description

Mode Change Instructions and Status:

After passing all pre-operational self-tests and cryptographic algorithm self-tests executed on start-up, the module automatically transitions to the approved mode. No operator intervention is required to reach this point. The module automatically switches between the approved and non-approved modes depending on the services requested by the operator. The status indicator of the mode of operation is equivalent to the indicator of the service that was requested.

Degraded Mode Description:

Not applicable.

Table 8: Security Function Implementations

2.7 Algorithm Specific Information

2.7.1 AES GCM IV

For IPsec, the module offers the AES GCM implementation and uses the context of Scenario 1 (b) of FIPS 140-3 IG C.H. The mechanism for IV generation is compliant with RFC 4106. IVs generated using this mechanism may only be used in the context of AES GCM encryption within the IPsec protocol.

The module does not implement IPsec. The module's implementation of AES GCM is used together with an application that runs outside the module's cryptographic boundary. This application must use RFC 7296 compliant IKEv2 to establish the shared secret SKEYSEED from which the AES GCM encryption keys are derived.

The design of the IPsec protocol implicitly ensures that the counter (the nonce_explicit part of the IV) does not exhaust the maximum number of possible values for a given session key.

In the event the module's power is lost and restored, the consuming application must ensure that a new key for use with the AES GCM key encryption or decryption under this scenario shall be established.

The module also provides a non-approved AES GCM encryption service which accepts arbitrary external IVs from the operator. This service can be requested by invoking the crypto_aead_encrypt API function with an AES GCM handle. When this is the case, the API will not set an approved service indicator, as described in the *Approved Services* table.

2.7.2 AES XTS

The length of a single data unit encrypted or decrypted with AES XTS shall not exceed 2^{20} AES blocks, that is 16MB, of data per XTS instance. An XTS instance is defined in Section 4 of SP 800-38E.

The XTS mode shall only be used for the cryptographic protection of data on storage devices. It shall not be used for other purposes, such as the encryption of data in transit. To meet the requirement stated in IG C.I, the module implements a check to ensure that the two AES keys used in AES XTS mode are not identical.

2.7.3 Diffie-Hellman and EC Diffie-Hellman

The module offers DH and ECDH shared secret computation services compliant to the SP 800-56Ar3 and meeting IG D.F scenario 2 path (1). In order to meet the required assurances listed in Section 5.6 of SP 800-56Ar3, the module shall be used together with an application that implements the IPSec protocol and the following steps shall be performed:

1. The entity using the module, must use the module's "Key pair generation" service: the set_secret and generate_public_key API functions, to generate DH/ECDH ephemeral key pairs. This meets the assurances required by key pair owner defined in the section 5.6.2.1 of SP 800-56Ar3.

2. As part of the module's shared secret computation service, the module internally performs the public key validation on the peer's public key passed in as input to the API function. This meets the public key validity assurance required by the sections 5.6.2.2.1/5.6.2.2.2 of SP 800-56Ar3.

3. The module does not support static keys, therefore the "assurance of peer's possession of private key" is not applicable.

2.7.4 SHA-3

The module implements HMAC with SHA3-224, SHA3-256, SHA3-384, SHA3-512. The CAVP certificates have been obtained for the HMAC algorithm as well as for all the SHA3 implementations. The CAVP certificates are listed in the *Approved Algorithms* table.

2.7.5 RSA

The module implements FIPS 186-4 RSA SigVer. All RSA modulus lengths (i.e., 2048, 3072, 4096 bits) have been CAVP tested. The CAVP certificates are listed in the *Approved Algorithms* table.

2.8 RBG and Entropy

Cert Number	Vendor Name
E59	Canonical Ltd.

Table 9: Entropy Certificates

Name	Type	Operational Environment	Sample Size	Entropy per Sample	Conditioning Component
Canonical Kernel CPU Time Jitter RNG Entropy source	Non-Physical	Ubuntu 22.04 LTS 64-bit on Intel(R) Xeon(R) Gold 6226 on Supermicro SYS-1019P-WTR; Ubuntu Core 22 64-bit on Intel(R) Xeon(R) Gold 6226 on Supermicro SYS-1019P-WTR; Ubuntu 22.04 LTS 64-bit on AWS Graviton2 on Amazon Web Services (AWS) c6g.metal; Ubuntu Core 22 64-bit on AWS Graviton2 on Amazon Web Services (AWS) c6g.metal; Ubuntu 22.04 LTS 64-bit on IBM z15 on IBM z15	64 bits	59.43 bits	Linear-Feedback Shift Register (LFSR)

Table 10: Entropy Sources

The module implements three different Deterministic Random Bit Generator (DRBG) implementations based on SP 800-90Ar1: Counter DRBG, Hash DRBG, and HMAC DRBG. Each of these DRBG implementations can be instantiated by the operator of the module, using the parameters listed specified in the *Security Function Implementations* table. When instantiated, these DRBGs can be used to generate random numbers for external usage.

Additionally, the module employs a specific HMAC SHA-512 DRBG implementation for internal purposes (e.g. to generate asymmetric key pairs). This DRBG is initially seeded with

448 output bits from the entropy source (416 bits of entropy) and reseeded with 320 output bits from the entropy source (297 bits of entropy).

2.9 Key Generation

The module implements Cryptographic Key Generation (CKG, vendor affirmed), compliant with SP 800-133r2. When random values are required, they are directly obtained as output from the SP 800-90Ar1 approved DRBG, compliant with Section 4 of SP 800-133r2 (without XOR). The following methods are implemented:

- Safe Primes key pair generation: compliant with SP 800-133r2, Section 5.2, which maps to SP 800-56Ar3. The method described in Section 5.6.1.1.4 of SP 800-56Ar3 (“Testing Candidates”) is used.
- ECDSA key pair generation: compliant with SP 800-133r2, Section 5.1 and 5.2. The method described in Appendix B.4.2 of FIPS 186-4 (“Testing Candidates”) is used. Note that this generation method is also used to generated ECDH key pairs.

Intermediate key generation values are not output from the module and are explicitly zeroized after processing the service.

2.10 Key Establishment

The module implements SSP agreement and SSP transport methods as listed in the *Security Function Implementations* table. The module implements the following SSP establishment methods:

Key agreement:

- KAS-FFC-SSC compliant with SP 800-56Ar3 and Scenario 2 (1) of FIPS 140-3 IG D.F; using ffdhe2048, ffdhe3072, ffdhe4096, ffdhe6144, ffdhe8192 safe primes groups with 112-200 bits of security strength.

- KAS-ECC-SSC compliant with SP 800-56Ar3 and Scenario 2 (1) of FIPS 140-3 IG D.F; using P-256, P-384 curves with 128, 192 bits of security strength.

Key transport:

- AES-KW according to IG D.G, using 128, 192, 256-bit keys with 128-256 bits of security strength.

- AES-CCM according to IG D.G, using 128, 192, 256-bit keys with 128-256 bits of security strength.

- AES-GCM according to IG D.G, using 128, 192, 256-bit keys with 128-256 bits of security strength.

- AES-CBC or AES-CTR with HMAC SHA-1, HMAC SHA-256, HMAC SHA-384, or HMAC SHA-512 according to IG D.G, using 128, 192, 256-bit AES keys with 128-256 bits of

security strength, and 112-524288 bits HMAC keys with 112-256 bits of security strength.

2.11 Industry Protocols

AES-GCM with internal IV generation in the approved mode is compliant with RFC 4106 and shall only be used in conjunction with the IPsec protocol.

For Diffie-Hellman, the module supports the use of the following safe primes:

- TLS (RFC 7919): ffdhe2048 (ID = 256), ffdhe3072 (ID = 257), ffdhe4096 (ID = 258), ffdhe6144 (ID = 259), ffdhe8192 (ID = 260)

No other parts of the TLS or IPSec protocols, other than those mentioned above, have been tested by the CAVP and CMVP.

3 Cryptographic Module Interfaces

3.1 Ports and Interfaces

Physical Port	Logical Interface(s)	Data That Passes
N/A	Data Input	API data input parameters, AF_ALG type sockets
N/A	Data Output	API output parameters, AF_ALG type sockets
N/A	Control Input	API function calls, API control input parameters, AF_ALG type sockets, kernel command line
N/A	Status Output	API return values, AF_ALG type sockets, kernel logs

Table 11: Ports and Interfaces

The logical interfaces are the APIs through which the applications request services. These logical interfaces are logically separated from each other by the API design. The module does not implement a control output interface.

4 Roles, Services, and Authentication

4.1 Authentication Methods

N/A for this module.

4.2 Roles

Name	Type	Operator Type	Authentication Methods
CO	Role	CO	None

Table 12: Roles

The module supports the Crypto Officer role only. This sole role is implicitly and always assumed by the operator of the module. No support is provided for multiple concurrent operators.

4.3 Approved Services

Name	Description	Indicator	Inputs	Outputs	Security Functions	SSP Access
Message Digest	Compute a message digest	crypto_shash_init returns 0	Message	Digest Value	Message Digest with SHA	CO
Encryption	Encrypt a plaintext	crypto_skcipher_setkey returns 0	AES Key, plaintext	Ciphertext	Encryption and Decryption with AES	CO - AES Key: W,E
Decryption	Decrypt a ciphertext	crypto_skcipher_setkey returns 0	AES Key, ciphertext	Plaintext	Encryption and Decryption with AES	CO - AES Key: W,E
Authenticated Encryption	Encrypt a plaintext	For all except AES GCM: crypto_aead_setkey returns 0; For AES GCM: crypto_aead_get_flags(tfm) has the CRYPTO_ALG_FIPS140_COMPLIANT flag set	AES Key, IV, plaintext	Ciphertext, MAC tag	Authenticated Encryption and Authenticated Decryption with AES-CCM Authenticated Encryption with AES-GCM Authenticated Encryption and Authenticated	CO - AES Key: W,E

Name	Description	Indicator	Inputs	Outputs	Security Functions	SSP Access
					Decryption with AES-CBC or AES-CTR with HMAC	
Authenticated Decryption	Decrypt a ciphertext	For all except AES GCM: crypto_aead_setkey returns 0; For AES GCM: crypto_aead_get_flags(tfm) has the CRYPTO_ALG_FIPS140_COMPLIANT flag set	AES key, IV, MAC tag, ciphertext	Plaintext or failure	Authenticated Encryption and Authenticated Decryption with AES-CCM Authenticated Decryption with AES-GCM Authenticated Encryption and Authenticated Decryption with AES-CBC or AES-CTR with HMAC	CO - AES Key: W,E
Message Authentication	Compute a MAC tag	crypto_shash_init returns 0	AES Key or HMAC key, message	MAC tag	Message Authentication with AES or HMAC	CO - AES Key: W,E - HMAC Key: W,E
Random Number Generation	Generate random bytes	crypto_rng_get_bytes returns 0	Output length	Random bytes	Random Number Generation with HMAC DRBG, Hash DRBG or Counter DRBG	CO - Entropy Input (IG D.L): W,E - DRBG Seed (IG D.L): G,E - DRBG Internal State (V, Key) (IG D.L): G,W,E - DRBG Internal State (V, C) (IG D.L): G,W,E

Name	Description	Indicator	Inputs	Outputs	Security Functions	SSP Access
Shared Secret Computation	Compute a shared secret	crypto_kpp_compute_shared_secret returns 0	DH private key, DH public key or EC private key, EC public key	Shared secret	Shared Secret Computation with KAS-FFC-SSC or KAS-ECC-SSC	CO - DH Public Key: W,E - DH Private Key: W,E - EC Public Key: W,E - EC Private Key: W,E - Shared Secret: G,R
Key Pair Generation	Generate a key pair	crypto_kpp_set_secret and crypto_kpp_generate_public_key return 0	Safe Primes: Group; ECDSA: Curve	Safe Primes: DH private key, DH public key; ECDSA: EC private key, EC public key	Key Pair Generation with ECDSA or Safe Primes	CO - Intermediate Key Generation Value: G,E,Z - DH Public Key: G,R - DH Private Key: G,R - EC Public Key: G,R - EC Private Key: G,R
Error Detection Code	Compute an EDC (crc32, crct10dif)	None	Message	EDC	None	CO
Compression	Compress data (deflate, lz4, lz4hc, lzo, zlib-deflate, zstd)	None	Data	Compressed data	None	CO
Generic System Call	Use the kernel to perform various non-cryptographic operations	None	Identifier, various arguments	Various return values	None	CO
Show Version	Return the module name and version	None	N/A	Module name and version	None	CO

Name	Description	Indicator	Inputs	Outputs	Security Functions	SSP Access
	information					
Show Status	Return the module status	None	N/A	Module status	None	CO
Self-Test	Perform the CASTs and integrity tests	None	N/A	Pass/fail	Encryption and Decryption with AES Random Number Generation with HMAC DRBG, Hash DRBG or Counter DRBG Message Authentication with AES or HMAC Shared Secret Computation with KAS-FFC-SSC or KAS-ECC-SSC Message Digest with SHA Authenticated Encryption and Authenticated Decryption with AES-CCM Authenticated Decryption with AES-GCM Signature Verification with RSA Authenticated Encryption with AES-GCM	CO

Name	Description	Indicator	Inputs	Outputs	Security Functions	SSP Access
Zeroization	Zeroize all SSPs	None	Any SSP	N/A	None	CO - AES Key: Z - HMAC Key: Z - Shared Secret: Z - Entropy Input (IG D.L): Z - DRBG Seed (IG D.L): Z - DRBG Internal State (V, Key) (IG D.L): Z - DRBG Internal State (V, C) (IG D.L): Z - DH Public Key: Z - DH Private Key: Z - EC Public Key: Z - EC Private Key: Z - Intermediate Key Generation Value: Z

Table 13: Approved Services

The following convention is used to specify access rights to SSPs:

- **Generate (G):** The module generates or derives the SSP.
- **Read (R):** The SSP is read from the module (e.g. the SSP is output).
- **Write (W):** The SSP is updated, imported, or written to the module.
- **Execute (E):** The module uses the SSP in performing a cryptographic operation.
- **Zeroize (Z):** The module zeroizes the SSP.
- **N/A:** The module does not access any SSP or key during its operation.

4.4 Non-Approved Services

Name	Description	Algorithms	Role
AES-GCM with external IV	Encryption	AES-GCM with external IV	CO
KBKDF (libkcapi)	Key derivation	KBKDF (libkcapi)	CO
HKDF (libkcapi)	Key derivation	HKDF (libkcapi)	CO
PBKDF2 (libkcapi)	Password-based key derivation	PBKDF2 (libkcapi)	CO
RSA	Encryption primitive; Decryption primitive	RSA	CO
RSA with PKCS#1 v1.5 padding	Signature generation (pre-hashed message); Signature verification (pre-hashed message); Key encapsulation; Key un-encapsulation	RSA with PKCS#1 v1.5 padding	CO

Table 14: Non-Approved Services

4.5 External Software/Firmware Loaded

Not applicable.

5 Software/Firmware Security

5.1 Integrity Techniques

The Linux kernel binary is integrity tested using an HMAC SHA-512 calculation performed by the sha512hmac utility (which utilizes the module's HMAC and SHA-512 implementations). The kernel crypto object files listed in the *Tested Module Identification – Software, Firmware, Hybrid (Executable Code Sets)* table are loaded on start-up by the module and verified using RSA signature verification with PKCS#1 v1.5 padding, SHA-512, and a 4096-bit key.

The libkcapi and sha512hmac software components perform their own internal integrity test, respectively using the HMAC SHA-256 and HMAC SHA-512 implementations provided by the Linux kernel.

5.2 Initiate on Demand

Integrity tests are performed as part of the pre-operational self-tests, which are executed when the module is initialized. The integrity tests can be invoked on demand by unloading and subsequently re-initializing the module, which will perform (among others) the software integrity tests.

6 Operational Environment

6.1 Operational Environment Type and Requirements

Type of Operational Environment: Modifiable

How Requirements are Satisfied: the module executes as part of a general-purpose operating system (Canonical Ubuntu 22.04 and Canonical Ubuntu Core 22), which allows modification, loading, and execution of software that is not part of the validated module.

The approved cryptographic algorithms of the module are part of the Linux kernel, which operates in Linux kernel space. This ensures that any SSPs contained within the module are protected by the process isolation and memory separation mechanisms provided by the Linux kernel, and only the module has control over these SSPs. The user space libkcapi and sha512hmac components, though not processing any SSPs, are similarly protected by the operating environment.

6.2 Configuration Settings and Restrictions

The module shall be installed as specified in Section 11.1.

Instrumentation tools like the ptrace system call, gdb and strace, as well as other tracing mechanisms offered by the Linux environment such as ftrace or systemtap, shall not be used in the operational environment. The use of any of these tools implies that the cryptographic module is running in a non-validated operational environment.

7 Physical Security

The module is comprised of software only and therefore this section is not applicable.

8 Non-Invasive Security

This module does not implement any non-invasive security mechanism and therefore this section is not applicable.

9 Sensitive Security Parameters Management

9.1 Storage Areas

Storage Area Name	Description	Persistence Type
RAM	Temporary storage for SSPs used by the Dynamic module as part of service execution	Dynamic

Table 15: Storage Areas

The module does not perform persistent storage of SSPs. The SSPs are temporarily stored in the RAM in plaintext form. SSPs are provided to the module by the calling process and are destroyed when released by the appropriate zeroization function calls.

9.2 SSP Input-Output Methods

Name	From	To	Format Type	Distribution Type	Entry Type	SFI or Algorithm
API input parameters; AF_ALG_type sockets (input)	Operator calling application (TOEPP)	Cryptographic module	Plaintext	Manual	Electronic	
API output parameters; AF_ALG type sockets (output)	Cryptographic module	Operator calling application (TOEPP)	Plaintext	Manual	Electronic	

Table 16: SSP Input-Output Methods

9.3 SSP Zeroization Methods

Zeroization Method	Description	Rationale	Operator Initiation
Free cipher handle	Zeroizes the SSPs contained within the cipher handle	Memory occupied by SSPs is overwritten with zeroes, which renders the SSP values irretrievable	By calling the appropriate zeroization functions: AES key: crypto_free_skcipher and crypto_free_aead; HMAC key: crypto_free_shash and crypto_free_ahash; Internal state: crypto_free_rng; DH public & private key: crypto_free_kpp; EC public & private key: crypto_free_kpp
Automatic	Automatically zeroized by the module when no longer needed	Memory occupied by SSPs is overwritten with zeroes, which renders the SSP values irretrievable.	N/A
Remove power from the module	De-allocates the volatile memory used to store SSPs	Volatile memory used by the module is overwritten within nanoseconds when power is removed.	By removing power

Table 17: SSP Zeroization Methods

All data output is inhibited during zeroization.

9.4 SSPs

Name	Description	Size - Strength	Type - Category	Generated By	Established By	Used By
AES Key	AES key used for Encryption; Decryption; Authenticated encryption; Authenticated decryption; Message authentication;	XTS: 128, 256 bits; ECB, CBC, CTR, CFB128, CBC-CTS-CS3, KW, OFB, CCM, GCM, CMAC, CMAC: 128, 192, 256 bits - XTS: 128, 256 bits; ECB, CBC, CTR, CFB128, CBC-CTS-CS3, KW, OFB, CCM, GCM, CMAC, CMAC: 128, 192, 256 bits	Symmetric key - CSP			Encryption and Decryption with AES Message Authentication with AES or HMAC
HMAC Key	HMAC key used for Message authentication code (MAC);	112-524288 bits - 112-256 bits	Symmetric key - CSP			Message Authentication with AES or HMAC
Shared Secret	Shared secret established during Shared Secret Computation	KAS-FFC-SSC:ffdhe2048, ffdhe3072, ffdhe4096, ffdhe6144, ffdhe8192; KAS-ECC-SSC: P-256, P-384 bits - KAS-FFC-SSC: 112-200 bits; KAS-ECC-SSC: 128, 192 bits	Shared secret - CSP		Shared Secret Computation with KAS-FFC-SSC or KAS-ECC-SSC	
Entropy Input (IG D.L)	Entropy input used to seed the DRBGs	128-448 bits - 128-256 bits	Entropy input - CSP			Random Number Generation with HMAC DRBG, Hash DRBG or Counter DRBG
DRBG Seed (IG D.L)	DRBG seed derived from Entropy Input	Counter DRBG: 256, 320, 384 bits; Hash_DRBG: 440, 888 bits; HMAC DRBG: 160, 256, 512 bits - Counter DRBG: 128, 192,	Seed - CSP	Random Number Generation with HMAC DRBG, Hash DRBG or Counter DRBG		Random Number Generation with HMAC DRBG, Hash DRBG or Counter DRBG

Name	Description	Size - Strength	Type - Category	Generated By	Established By	Used By
		256 bits; Hash DRBG: 128, 256 bits; HMAC DRBG: 128, 256 bits				
DRBG Internal State (V, Key) (IG D.L)	Internal state of Counter DRBG and HMAC DRBG instances	Counter DRBG: 256, 320, 348 bits; HMAC DRBG: 320, 512, 1024 bits - Counter DRBG: 128, 192, 256 bits; HMAC DRBG: 128, 256 bits	Internal state - CSP	Random Number Generation with HMAC DRBG, Hash DRBG or Counter DRBG		Random Number Generation with HMAC DRBG, Hash DRBG or Counter DRBG
DRBG Internal State (V, C) (IG D.L)	Internal state of Hash DRBG instance	440, 888 bits - 128, 256 bits	Internal state - CSP	Random Number Generation with HMAC DRBG, Hash DRBG or Counter DRBG		Random Number Generation with HMAC DRBG, Hash DRBG or Counter DRBG
DH Public Key	Public key used for KAS-FFC-SSC	ffdhe2048, ffdhe3072, ffdhe4096, ffdhe6144, ffdhe8192 - 112-200 bits	Public key - PSP	Key Pair Generation with ECDSA or Safe Primes		Shared Secret Computation with KAS-FFC-SSC or KAS-ECC-SSC
DH Private Key	DH private key used for KAS-FFC-SSC	ffdhe2048, ffdhe3072, ffdhe4096, ffdhe6144, ffdhe8192 - 112-200 bits	Private key - CSP	Key Pair Generation with ECDSA or Safe Primes		Shared Secret Computation with KAS-FFC-SSC or KAS-ECC-SSC
EC Public Key	Public key used for KAS-ECC-SSC	P-256, P-384 - 128, 192 bits	Public key - PSP	Key Pair Generation with ECDSA or Safe Primes		Shared Secret Computation with KAS-FFC-SSC or KAS-ECC-SSC
EC Private Key	EC private key used for KAS-ECC-SSC	P-521, P-384 - 128, 192 bits	Private key - CSP	Key Pair Generation with ECDSA or Safe Primes		Shared Secret Computation with KAS-FFC-SSC or KAS-ECC-SSC
Intermediate Key Generation Value	Intermediate value generated during Key Pair Generation	2048-8192 bits - 112-200 bits	Intermediate value - CSP	Key Pair Generation with ECDSA or Safe Primes		Key Pair Generation with ECDSA or Safe Primes

Table 18: SSP Table 1

Name	Input - Output	Storage	Storage Duration	Zeroization	Related SSPs
AES Key	API input parameters; AF_ALG_type sockets (input)	RAM:Plaintext	From service invocation to service completion	Free cipher handle Remove power from the module

Table 19: SSP Table 2

9.5 Transitions

The SHA-1 algorithm as implemented by the module will be non-approved for all purposes, starting January 1, 2030.

The RSA algorithm as implemented by the module conforms to FIPS 186-4, which has been superseded by FIPS 186-5. FIPS 186-4 was withdrawn on February 3, 2024.

10 Self-Tests

10.1 Pre-Operational Self-Tests

Algorithm or Test	Test Properties	Test Method	Test Type	Indicator	Details
HMAC-SHA2-256 (A3812)	128-bit key	Message Authentication	SW/FW Integrity	Module becomes operational and services are available for use	Used for libkcapi
HMAC-SHA2-256 (A3813)	128-bit key	Message Authentication	SW/FW Integrity	Module becomes operational and services are available for use	Used for libkcapi
HMAC-SHA2-256 (A3814)	128-bit key	Message Authentication	SW/FW Integrity	Module becomes operational and services are available for use	Used for libkcapi
HMAC-SHA2-256 (A3832)	128-bit key	Message Authentication	SW/FW Integrity	Module becomes operational and services are available for use	Used for libkcapi
HMAC-SHA2-256 (A3850)	128-bit key	Message Authentication	SW/FW Integrity	Module becomes operational and services are available for use	Used for libkcapi
HMAC-SHA2-256 (A3851)	128-bit key	Message Authentication	SW/FW Integrity	Module becomes operational and services are available for use	Used for libkcapi
HMAC-SHA2-256 (A3852)	128-bit key	Message Authentication	SW/FW Integrity	Module becomes operational and services are available for use	Used for libkcapi
HMAC-SHA2-256 (A3853)	128-bit key	Message Authentication	SW/FW Integrity	Module becomes operational and services are available for use	Used for libkcapi
HMAC-SHA2-256 (A3857)	128-bit key	Message Authentication	SW/FW Integrity	Module becomes operational and services are available for use	Used for libkcapi
HMAC-SHA2-256 (A3858)	128-bit key	Message Authentication	SW/FW Integrity	Module becomes operational and services are available for use	Used for libkcapi
HMAC-SHA2-512 (A3812)	128-bit key	Message Authentication	SW/FW Integrity	Module becomes operational and services are available for use	Used for kernel and sha512hmac binaries
HMAC-SHA2-512 (A3813)	128-bit key	Message Authentication	SW/FW Integrity	Module becomes operational and	Used for kernel and sha512hmac binaries

Algorithm or Test	Test Properties	Test Method	Test Type	Indicator	Details
				services are available for use	
HMAC-SHA2-512 (A3814)	128-bit key	Message Authentication	SW/FW Integrity	Module becomes operational and services are available for use	Used for kernel and sha512hmac binaries
HMAC-SHA2-512 (A3832)	128-bit key	Message Authentication	SW/FW Integrity	Module becomes operational and services are available for use	Used for kernel and sha512hmac binaries
HMAC-SHA2-512 (A3850)	128-bit key	Message Authentication	SW/FW Integrity	Module becomes operational and services are available for use	Used for kernel and sha512hmac binaries
HMAC-SHA2-512 (A3851)	128-bit key	Message Authentication	SW/FW Integrity	Module becomes operational and services are available for use	Used for kernel and sha512hmac binaries
HMAC-SHA2-512 (A3852)	128-bit key	Message Authentication	SW/FW Integrity	Module becomes operational and services are available for use	Used for kernel and sha512hmac binaries
HMAC-SHA2-512 (A3858)	128-bit key	Message Authentication	SW/FW Integrity	Module becomes operational and services are available for use	Used for kernel and sha512hmac binaries
RSA SigVer (FIPS186-4) (A3814)	4096-bit key with SHA-512	Signature Verification	SW/FW Integrity	Module becomes operational and services are available for use	Used for kernel crypto object files
RSA SigVer (FIPS186-4) (A3832)	4096-bit key with SHA-512	Signature Verification	SW/FW Integrity	Module becomes operational and services are available for use	Used for kernel crypto object files
RSA SigVer (FIPS186-4) (A3850)	4096-bit key with SHA-512	Signature Verification	SW/FW Integrity	Module becomes operational and services are available for use	Used for kernel crypto object files
RSA SigVer (FIPS186-4) (A3851)	4096-bit key with SHA-512	Signature Verification	SW/FW Integrity	Module becomes operational and services are available for use	Used for kernel crypto object files
RSA SigVer (FIPS186-4) (A3852)	4096-bit key with SHA-512	Signature Verification	SW/FW Integrity	Module becomes operational and services are available for use	Used for kernel crypto object files

Table 20: Pre-Operational Self-Tests

The pre-operational software integrity tests are performed automatically when the module is powered on, before the module transitions into the operational state. While the module is executing the self-tests, services are not available, and data output (via the data output interface) is inhibited until the tests are successfully completed. The module transitions to the operational state only after the pre-operational self-tests are passed successfully.

10.2 Conditional Self-Tests

Algorithm or Test	Test Properties	Test Method	Test Type	Indicator	Details	Conditions
AES-ECB (A3812)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-ECB (A3813)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-ECB (A3814)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-ECB (A3820)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-ECB (A3821)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-ECB (A3822)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-ECB (A3824)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-ECB (A3825)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-ECB (A3829)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-ECB (A3830)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test

Algorithm or Test	Test Properties	Test Method	Test Type	Indicator	Details	Conditions
AES-ECB (A3831)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-ECB (A3832)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-ECB (A3833)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-ECB (A3834)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-ECB (A3840)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-ECB (A3841)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-ECB (A3842)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-ECB (A3843)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-ECB (A3844)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-ECB (A3845)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-ECB (A3853)	128, 192, 256 bit keys, encrypt	KAT	CAST	Module becomes operational and	Encryption	Test runs at power-on

Algorithm or Test	Test Properties	Test Method	Test Type	Indicator	Details	Conditions
				services are available for use		before the integrity test

Algorithm or Test	Test Properties	Test Method	Test Type	Indicator	Details	Conditions
AES-GCM (A3842)	128, 192, 256 bit keys, 96-bit (internal IV), decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-GCM (A3843)	128, 192, 256 bit keys, 96-bit (internal IV), decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-GCM (A3844)	128, 192, 256 bit keys, 96-bit (internal IV), decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-GCM (A3845)	128, 192, 256 bit keys, 96-bit (internal IV), decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-GCM (A3854)	128, 192, 256 bit keys, 96-bit (internal IV), decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-GCM (A3855)	128, 192, 256 bit keys, 96-bit (internal IV), decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-GCM (A3856)	128, 192, 256 bit keys, 96-bit (internal IV), decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-OFB (A3818)	128 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-OFB (A3827)	128 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-OFB (A3837)	128 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-OFB (A3848)	128 bit keys, encrypt	KAT	CAST	Module becomes operational and	Encryption	Test runs at power-on

Algorithm or Test	Test Properties	Test Method	Test Type	Indicator	Details	Conditions
				services are available for use		before the integrity test
AES-OFB (A3854)	128 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-OFB (A3818)	128 bit keys, decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-OFB (A3827)	128 bit keys, decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-OFB (A3837)	128 bit keys, decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-OFB (A3848)	128 bit keys, decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-OFB (A3854)	128 bit keys, decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-XTS Testing Revision 2.0 (A3814)	128 and 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-XTS Testing Revision 2.0 (A3822)	128 and 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-XTS Testing Revision 2.0 (A3829)	128 and 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-XTS Testing Revision 2.0 (A3832)	128 and 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test

Algorithm or Test	Test Properties	Test Method	Test Type	Indicator	Details	Conditions
AES-XTS Testing Revision 2.0 (A3840)	128 and 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-XTS Testing Revision 2.0 (A3843)	128 and 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-XTS Testing Revision 2.0 (A3853)	128 and 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-XTS Testing Revision 2.0 (A3854)	128 and 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-XTS Testing Revision 2.0 (A3857)	128 and 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Encryption	Test runs at power-on before the integrity test
AES-XTS Testing Revision 2.0 (A3814)	128 and 256 bit keys, decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-XTS Testing Revision 2.0 (A3822)	128 and 256 bit keys, decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-XTS Testing Revision 2.0 (A3829)	128 and 256 bit keys, decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-XTS Testing Revision 2.0 (A3832)	128 and 256 bit keys, decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-XTS Testing Revision 2.0 (A3840)	128 and 256 bit keys, decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-XTS Testing	128 and 256 bit keys, decrypt	KAT	CAST	Module becomes operational and	Decryption	Test runs at power-on

Algorithm or Test	Test Properties	Test Method	Test Type	Indicator	Details	Conditions
Revision 2.0 (A3843)				services are available for use		before the integrity test
AES-XTS Testing Revision 2.0 (A3853)	128 and 256 bit keys, decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-XTS Testing Revision 2.0 (A3854)	128 and 256 bit keys, decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-XTS Testing Revision 2.0 (A3857)	128 and 256 bit keys, decrypt	KAT	CAST	Module becomes operational and services are available for use	Decryption	Test runs at power-on before the integrity test
AES-CMAC (A3814)	128 and 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Message authentication	Test runs at power-on before the integrity test
AES-CMAC (A3822)	128 and 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Message authentication	Test runs at power-on before the integrity test
AES-CMAC (A3829)	128 and 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Message authentication	Test runs at power-on before the integrity test
AES-CMAC (A3832)	128 and 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Message authentication	Test runs at power-on before the integrity test
AES-CMAC (A3843)	128 and 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Message authentication	Test runs at power-on before the integrity test
AES-CMAC (A3853)	128 and 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Message authentication	Test runs at power-on before the integrity test
AES-CMAC (A3854)	128 and 256 bit keys, encrypt	KAT	CAST	Module becomes operational and services are available for use	Message authentication	Test runs at power-on before the integrity test

Algorithm or Test	Test Properties	Test Method	Test Type	Indicator	Details	Conditions
SHA-1 (A3812)	SHA-1	KAT	CAST	Module becomes operational and services are available for use	Message digest	Test runs at power-on before the integrity test
SHA-1 (A3813)	SHA-1	KAT	CAST	Module becomes operational and services are available for use	Message digest	Test runs at power-on before the integrity test
SHA-1 (A3814)	SHA-1	KAT	CAST	Module becomes operational and services are available for use	Message digest	Test runs at power-on before the integrity test
SHA-1 (A3832)	SHA-1	KAT	CAST	Module becomes operational and services are available for use	Message digest	Test runs at power-on before the integrity test
SHA-1 (A3850)	SHA-1	KAT	CAST	Module becomes operational and services are available for use	Message digest	Test runs at power-on before the integrity test
SHA-1 (A3851)	SHA-1	KAT	CAST	Module becomes operational and services are available for use	Message digest	Test runs at power-on before the integrity test
SHA-1 (A3852)	SHA-1	KAT	CAST	Module becomes operational and services are available for use	Message digest	Test runs at power-on before the integrity test
SHA-1 (A3853)	SHA-1	KAT	CAST	Module becomes operational and services are available for use	Message digest	Test runs at power-on before the integrity test
SHA2-224 (A3812)	SHA2-224	KAT	CAST	Module becomes operational and services are available for use	Message digest	Test runs at power-on before the integrity test
SHA2-224 (A3813)	SHA2-224	KAT	CAST	Module becomes operational and services are available for use	Message digest	Test runs at power-on before the integrity test
SHA2-224 (A3814)	SHA2-224	KAT	CAST	Module becomes operational and	Message digest	Test runs at power-on

Algorithm or Test	Test Properties	Test Method	Test Type	Indicator	Details	Conditions

Table 23: Conditional Periodic Information

10.4 Error States

Name	Description	Conditions	Recovery Method	Indicator
Error State	The Linux kernel immediately stops executing	Any self-test failure	Restart of the module	Kernel Panic

Table 24: Error States

In the Error State, the output interface is inhibited, and the module accepts no more inputs or requests (as the module is no longer running).

10.5 Operator Initiation of Self-Tests

The software integrity tests, cryptographic algorithm self-tests, and entropy source start-up tests can be invoked on demand by unloading and subsequently re-initializing the module. The pair-wise consistency tests can be invoked on demand by requesting the key pair generation service.

11 Life-Cycle Assurance

11.1 Installation, Initialization, and Startup Procedures

On the Ubuntu 22.04 LTS operational environments, the module is distributed in the form of the following deb packages:

- linux-image-5.15.0-73-fips=5.15.0-73.80+fips1
- linux-modules-5.15.0-73-fips=5.15.0-73.80+fips1
- linux-image-hmac-5.15.0-73-fips=5.15.0-73.80+fips1
- libkcapi1=1.4.0-1ubuntu0.1~Fips1
- kcapi-tools=1.4.0-1ubuntu0.1~Fips1

On the Ubuntu Core 22 operational environments, the module is distributed in the form of the "fips-kernel" snap, with snap-id ZjfoRia9mZzIe2xoWtGxHNUQsSSqjzUK. Revision 4 and 9 are respectively validated for x86 and arm64 platforms.

Once the Ubuntu 22.04 LTS operational environment is configured following the instructions provided in Section 11.1, and configuration to access the PPA is complete, the Crypto Officer can install the Ubuntu packages containing the module using the Advanced Package Tool (APT) with the following command line:

$ sudo apt-get install linux-image-5.15.0-73-fips=5.15.0-73.80+fips1 linux-modules-5.15.0-73-fips=5.15.0-73.80+fips1 linux-image-hmac-5.15.0-73-fips=5.15.0-73.80+fips1 libkcapi1=1.4.0-1ubuntu0.1~Fips1 kcapi-tools=1.4.0-1ubuntu0.1~Fips1

All the Ubuntu packages are associated with hashes for integrity check. The integrity of the Ubuntu package is automatically verified by the packing tool during the installation of the module. The Crypto Officer shall not install the package if the integrity check fails.

Installation of the module on the Ubuntu Core 22 operational environment simply consists of flashing the operating system image to a hard drive, then following the instructions on the screen.

After the module is installed, the Crypto Officer must execute:

$ cat /proc/sys/crypto/fips_name

The Crypto Officer must ensure that the proper name is listed in the output as follows:

Ubuntu 22.04 Kernel Crypto API Cryptographic Module

Then, the Crypto Officer must execute:

$ cat /proc/sys/crypto/fips_version

This command must output the following:

5.15.0-73-fips

On the Ubuntu 22.04 LTS operational environments, versions of the installed packages can be verified using the following command:

$ dpkg-query -W linux-image-5.15.0-73-fips linux-modules-5.15.0-73-fips linux-image-hmac-5.15.0-73-fips libkcapi1 kcapi-tools

On the Ubuntu Core 22 operational environments, revisions of the installed snaps can be verified using the following command:

$ snap list fips-kernel

11.2 Administrator Guidance

The Approved and non-Approved modes of operation are specified in section 2.4. The administrative functions are specified in the *Approved Services* table. All the physical ports and logical interfaces are specified in section 3.1.

11.3 Non-Administrator Guidance

The approved and non-approved security functions available to users are listed in section 2, the physical ports, and logical interfaces available to users are specified in section 3.1. The Approved and non-Approved modes of operation are specified in section 2.4. The algorithm-specific information is listed in section 2.7.

11.4 End of Life

As the module does not persistently store SSPs, secure sanitization of the module consists of unloading the module. This will zeroize all SSPs in volatile memory.

If desired, the linux-image-5.15.0-73-fips, linux-modules-5.15.0-73-fips, linux-image-hmac-5.15.0-73-fips, libkcapi1, and kcapi-tools deb packages can be uninstalled from the Ubuntu 22.04 LTS system.

The Ubuntu Core 22 system is distributed as an operating system image, so removing this image will also uninstall the module. Alternatively, the “snap remodel” command can be used to switch to a generic model with a different kernel.

12 Mitigation of Other Attacks

The module does not offer mitigation of other attacks and therefore this section is not applicable.

Appendix A. Glossary and Abbreviations

AES	Advanced Encryption Standard
API	Application Programming Interface
CAST	Cryptographic Algorithm Self-Test
CAVP	Cryptographic Algorithm Validation Program
CBC	Cipher Block Chaining
CCM	Counter with Cipher Block Chaining-Message Authentication Code
CFB	Cipher Feedback
CKG	Cryptographic Key Generation
CMAC	Cipher-based Message Authentication Code
CMVP	Cryptographic Module Validation Program
CSP	Critical Security Parameter
CTR	Counter
CTS	Ciphertext Stealing
DRBG	Deterministic Random Bit Generator
ECB	Electronic Code Book
ECC	Elliptic Curve Cryptography
ECDH	Elliptic Curve Diffie-Hellman
ECDSA	Elliptic Curve Digital Signature Algorithm
FFC	Finite Field Cryptography
FIPS	Federal Information Processing Standards
GCM	Galois Counter Mode
GMAC	Galois Counter Mode Message Authentication Code
HKDF	HMAC-based Key Derivation Function
HMAC	Keyed-Hash Message Authentication Code
IPsec	Internet Protocol Security
KAS	Key Agreement Scheme
KAT	Known Answer Test
KBKDF	Key-based Key Derivation Function
KW	Key Wrap
MAC	Message Authentication Code
NIST	National Institute of Science and Technology
OFB	Output Feedback
PAA	Processor Algorithm Acceleration
PAI	Processor Algorithm Implementation
PCT	Pair-wise Consistency Test
PBKDF2	Password-based Key Derivation Function v2
PKCS	Public-Key Cryptography Standards
RSA	Rivest, Shamir, Addleman
SHA	Secure Hash Algorithm
SSC	Shared Secret Computation
SSP	Sensitive Security Parameter
XTS	XEX-based Tweaked-codebook mode with cipher text Stealing
